Agricultural Commissioner/Director of Weights and Measures

SUBJECT:

REPORT ON THE FEASIBILITY OF MOVING THE TOXICOLOGY LAB

FROM THE DEPARTMENT OF AGRICULTURAL COMMISSIONER/

WEIGHTS AND MEASURES TO THE DEPARTMENT OF PUBLIC HEALTH

fonathan E Fielding

This is the final report on the actions that have been taken by the Chief Executive Officer (CEO), the Department of Public Health (DPH), and the Agricultural Commissioner/Weights and Measure (ACWM) to respond to the Board's December 6, 2011 motion in which the Board directed the CEO, DPH, and ACWM to report back on the feasibility of moving the Environmental Toxicology Lab (ETL) from ACWM to DPH.

In an April 17, 2012 memo to your Board, a workgroup comprised of staff from DPH, ACWM, and CEO extensively explored the feasibility of moving the ETL to DPH, and concluded that this movement would not result in significant efficiencies. The workgroup's review of this matter also determined that there is no apparent optimal organizational alignment of the ETL within the County government. In order to receive a thorough review, however, DPH and ACWM recommended contracting with an independent third party County-approved consulting firm with experience in public management and/or health services to: review the issue; examine the workload, budget, and space needs of the ETL; and provide recommendations.

Since the last update to your Board on December 3, 2012, the consultant has completed the review and provided the analysis and recommendations in the attached report. The consultant met with DPH and ACWM on multiple occasions; conducted numerous interviews with key individuals, including staff from the ETL, the DPH Public Health Laboratory (PHL), the CEO, the Internal Services Department (ISD), and the Department of Public Works (DPW); collected data related to operations, staffing, certification requirements, budget, workload, and client base; assessed space needs; and evaluated how ETL testing services are provided in other counties.

Each Supervisor February 21, 2013 Page 2

#### **Executive Summary of Consultant's Findings**

The consultant concurred with the workgroup's conclusions that integrating the ETL and PHL would not result in any significant quality improvements or efficiencies due to the significant differences between the two laboratories. The ETL and the PHL have disparate workloads, function differently in their operations, maintain different types of State certifications, and require different types of certified staff. In addition, both laboratories have space constraints and the PHL does not have the space to house the ETL. Further, none of the four departments involved – ACWM, DPH, DPW, and ISD – believe that they require the operational capability for environmental toxicology laboratory services within their respective departments.

The consultant noted that the ETL does testing of storm and ground waters, soil, plants, food, and pesticides; but that the majority of its work is performed on drinking water. There are no mandates that require the County to provide these and the other services offered by the ETL and private sector laboratories are able to provide the same services. Although the ETL has the capability to perform more than 300 types of tests, the vast majority of these tests are performed infrequently and 16 of the tests account for more than 50% of the ETL's revenue.

The consultant considered various placement scenarios for the ETL and rated each using the same criteria, including: keeping the ETL at the ACWM; transferring the ETL to DPH; transferring the ETL to DPW (DPW's testing requests constitute some 90% of the ETL's work); transferring the ETL to ISD (ISD currently maintains a small water testing laboratory); or outsourcing most or all of the ETL's services to a private laboratory.

#### Recommendations

#### Option 1

The consultant's review of revenue and expenditures over the past four years determined that the annual net County cost (NCC) to operate the ETL is approximately \$2 million, including County overhead costs. The consultant concluded that, if your Board considers cost to the taxpayers as the sole determining factor, then outsourcing the services currently provided by the ETL would be the most optimal solution to address the continued deficit and the quickest way to minimize costs. Outsourcing the services currently provided by the ETL would require ETL staff mitigation.

#### Option 2

Should your Board decide that the County needs to have the operational capability for environmental toxicology laboratory services, then the ETL is better aligned with DPH or DPW than with ACWM. DPH has divisions which are relevant to the ETL including Communicable Disease Control and Prevention (CDCP) and the Environmental Health (EH). The CDCP operates the PHL. EH has a Bureau of Environmental Protection and a Bureau of Toxicology and Environmental Assessment, both of which have requirements for tests which the ETL could satisfy.

Alternatively, a significant portion of DPW's workload concerns water-related issues. As a department, DPW has five divisions that focus on water: Waterworks, Flood Maintenance, Water Resources, Watershed Management, and Disaster Services Groups. DPW-requested water tests make up 90% of the tests that the ETL performs overall. DPW does not have its own water testing laboratory.

Each Supervisor February 21, 2013 Page 3

If the ETL is transferred to DPH or DPW (or even retained in ACWM), some of the issues identified by the consultant that would need to be addressed include: recruitment of an ETL Lab Director; continuing provision of \$2 million in NCC to operate the ETL; provision of \$1.5 million to refurbish the ETL at its existing location (or funding to construct a new lab facility for the ETL); strongly encouraging that County departments utilize ETL for their toxicology testing (including ISD for their water testing and DPW for both their water as well as soil sample testing); and review and revise the ETL's testing portfolio and fee rates.

If you have any questions or would like additional information, please contact either of us.

#### EXECUTIVE SUMMARY

This document reports on a study for the Los Angeles County (LAC) Department of Public Health (DPH) regarding the placement of the Department of Agricultural Commissioner / Weights and Measures' (ACWM) Environmental Toxicology Laboratory (ETL) within the LAC organizational structure. The need for the study arose on December 6, 2011, when the County Board of Supervisors directed the Chief Executive Officer (CEO) to report on the feasibility of moving the ETL from the ACWM to the DPH. DPH requested that, within 30 days, the study provide a recommendation and a comprehensive analysis of key issues.

#### Methodology

In conjunction with the Project Steering Committee, comprising directors and senior staff from ACWM and DPH, we have evaluated and analyzed the ETL's key issues, such as operational structure and processes, staffing, space needs and availability, certification requirements, budget, workload and facility upgrade/repair needs, and have prepared recommendations regarding the ETL's placement within the LAC organizational structure, as specified in the work order.

To conduct the study we met with 40 directors and staff at the ACWM including the ETL, DPH including the Public Health Laboratory (PHL), Department of Public Works (DPW), Internal Services Department (ISD) and other interested parties. We also conducted a brief survey of laboratories in other counties.

We considered alternative placements for the ETL, including transferring the ETL to another LAC Department, such as the DPW which provides 90% of ETL's work, and transferring the ETL to the DPH without merging it with the PHL. As the study progressed, it was agreed with the Steering Committee that, in addition to the placement of the ETL inside the LAC organizational structure, outsourcing ETL's services should be compared to the other alternatives. In total, six alternative placements were evaluated against eight criteria.

#### **Findings**

Clients give ETL's services a high satisfaction rating. ETL's 18 staff perform nearly 45,000 matrices using 340 different tests in a year. Most are inorganic chemical tests, but 27% of the matrices and 10% of the tests are microbiological. Many of the microbiological tests overlap with tests done by the PHL. The tests are not mandated as a County activity.

The ETL's Net County Cost over the last four years has varied between \$1.23 and \$1.35 million per year, excluding ACWM and County overheads. However, we estimate that this cost could be reduced by more proactive direction of the ETL.

#### **Conclusions**

The best placement of the ETL within the LAC organization structure is to transfer the ETL, as a unit, to the DPH. However, in our analysis, transferring the ETL to the DPH rated equally with outsourcing ETL's services. If the Board considers cost to the taxpayers as the sole determining

factor, then outsourcing the work of the ETL is the higher rated option and the quickest way to minimize costs.

In practice, outsourcing would mean asking ETL's clients to send their microbiology work to the PHL and to contract with laboratories outside the County for their other testing work. Microbiology testing represents about 27% of the 45,000 matrices that ETL performs each year and would more than triple the work of the small, water testing laboratory at the PHL. We recognize that on April 17, 2012, a work group, comprising staff from ACWM, DPH and the CEO's office, submitted a report to the Board that considered merging the ETL into the DPH's PHL. The group found that, due to differences between the ETL and the PHL, the ability to integrate staffs to improve quality and gain efficiencies is limited. Furthermore, it was reported that the PHL does not currently have the space to house the ETL. We agree that the ETL should not be merged as a unit with the PHL but we are confident that the microbiology testing could be transferred beneficially to the PHL and that laboratory space could be provided.

In regard to the effect of outsourcing on ETL staff, except for those that may be transferred to the PHL, it would displace staff from their jobs at the ETL and would require mitigation to other positions within the County. We have not done a comprehensive study on the impact to the County of closing the ETL.

#### Recommendations

We recommend that the Board decide whether, as a matter of policy, the County should have the operational capability to conduct environmental toxicology laboratory services, or should outsource the services. None of the four Departments involved – ACWM, DPH, DPW, ISD – believe that they require the operational capability within their respective departments.

If the County should provide the services, we recommend the ETL be transferred to the DPH. Initially, the ETL should be placed in the Communicable Disease Control and Prevention Division, because it also has the PHL, there is a need for rationalization of testing between the two laboratories, and it could more rapidly start taking the actions we have identified to improve the efficiency of the ETL and reduce its Net County Cost. Longer term, the ETL may find an appropriate place and be better aligned with the work in the Environmental Health Division within DPH.

#### 1. INTRODUCTION

As a result of a response to Request for Services (RFS) No. 2012-295-1 issued by the Los Angeles County Department of Public Health, CGR Management Consultants LLC was authorized to make recommendations regarding the placement of the Department of Agricultural Commissioner / Weights and Measures' (ACWM) Environmental Toxicology Laboratory (ETL) within the Los Angeles County (LAC) organizational structure. LAC is considering the feasibility of moving the ETL from ACWM to the Department of Public Health's (DPH) Laboratory (PHL).

Furthermore, the RFS called for a "comprehensive analysis of key issues such as operational structure and processes, staffing, space needs and availability, certification requirements, budget, workload, and facility upgrades".

Note that, in discussions during the project, it was clarified that placement of the ETL outside of the LAC organizational structure should also be considered.

#### 1.1 History

The topic of moving the ETL from its current placement in the ACWM rose to prominence on December 6, 2011 when the Board of Supervisors directed the Chief Executive Officer (CEO) to report back within a month on the feasibility of moving the ETL from the ACWM to the DPH. On December 28, 2011, the CEO provided a status report to the Board and indicated that DPH would provide the final report.

A work group comprising staff from ACWM, DPH and CEO met several times and on April 17, 2012, the DPH provided a report to the Board. The report stated that there are two possibilities:

- 1. Remain status quo and keep both labs (ETL and PHL) as they are currently functioning.
- 2. Transfer the ETL to DPH.

The report recommended an independent consulting firm be appointed to review the issue and provide recommendations.

#### 1.2 Structure of This Report

Following this introduction, this report sets out:

**Methodology**: This section describes the methodology used to assess the ETL's current situation, develop a recommendation for the placement of the ETL and prepare plans for initial actions.

Alternative Placements: This section identifies four potential, alternative solutions for the organizational location of the laboratory and five alternatives for the physical location of the ETL.

Criteria for Selection: This section describes the eight criteria to be used in assessing and comparing the alternatives.

Assessment of the Alternatives: This section assesses each of the alternatives against the criteria.

Comparison of Alternatives: This section compares the alternatives.

Recommendations: This section contains the recommendation of the best alternative.

Action Plan: This section sets out the initial actions to be taken to implement the recommendations.

In this document, the meanings of frequently used terms are as follows:

"Test" is equivalent to "method" and refers to a procedure that can be used on more than one type of sample with only slight differences in procedure.

"Matrix" is a test performed on one type of sample.

For example, FE-200.8, a single test or method, performed on drinking water and on storm water is two matrices.

"Drinking water" is typically water from wells. The Los Angeles County Waterworks Districts, that require about 95% of the drinking water matrices that the ETL performs, serve more than 200,000 people.

"Water" is usually storm or ground water, but can be any water sample that is not otherwise identified.

"Waste Water" is water from an industrial plant, usually a water treatment plant.

#### 2. METHODOLOGY

The work was organized into seven tasks. The tasks were:

- Task 1. Study Initiation.
- Task 2. Business Assessment, Recommendations for Placement and Draft Report.
- Task 3. Space Assessment.
- Task 4. Legal Mandates.
- Task 5. Certification Considerations.
- Task 6. Comparisons to Other Counties.
- Task 7. Final Report.

Tasks 2 to 6 were done in parallel, as shown in Figure 2.1 and described below.

Figure 2.1 - Organization of Tasks

Initially we evaluated the processes and facilities at the ETL and the PHL. This included an examination of the current provider service model and an assessment of the support processes provided by the ACWM and the DPH.

Once we recognized that there is little synergy between the ETL and the PHL outside the area of microbiological services, we extended our assessment to alternative placements. We reviewed the testing services available from private laboratories and the possibility of placing the ETL in the Department of Public Works or the Internal Services Department. We also compared these possibilities with outsourcing the work of the ETL, but did not do a comprehensive study of the impact on the County of closing the ETL.

We prepared a survey and contacted 12 other county laboratories in California to determine the services they offered and the placement of their laboratories. Nine responded. Then we reviewed whether the current product (water) – centric organization should be replaced with a functional (chemistry / microbiology) or client-centric organization. Finally, we prepared our recommendations and concluded the study by presenting the facts and the reasoning behind our recommendations to the Project Steering Committee. A list of the 40 people interviewed is attached as Appendix I.

#### 3. ALTERNATIVE PLACEMENTS

We identified the following alternatives for both the organizational placement and the location of the ETL. These alternatives were agreed by the project Steering Committee at a meeting on November 26, 2012:

#### 1. Retain the ETL in the ACWM

The ACWM may decide to:

- i. Maintain the status quo
- ii. Maintain the current placement of the ETL within the ACWM but revitalize the direction of the ETL
- iii. Transfer the ETL to another ACWM bureau
- iv. Negotiate a redefinition of the roles of ETL and PHL and the transfer of some of PHL's work to ETL.

#### 2. Transfer the ETL to the DPH

The DPH may decide to:

- i. Merge the ETL with the PHL
- ii. Restructure the PHL/ETL and possibly outsource some of the ETL's work
- iii. Place the ETL in a division of the DPH unrelated to the PHL.

#### 3. Transfer the ETL to another Department within Los Angeles County

The Department of Public Works, ETL's largest customer, was the obvious choice, but the Internal Services Department, which also does some testing of water, was also considered.

The DPW may decide to:

- i. Continue the ETL's services to all clients
- ii. Use the ETL only for testing that DPW requires.

#### 4. Outsource most or all of the work of the ETL

These alternatives were combined with the following locations alternatives:

- a. Leave the ETL as it is
- b. Refurbish the current facilities
- c. Relocate to the PHL
- d. Relocate to near the PHL
- e. Relocate to a building in a different area.

#### 4. CRITERIA FOR SELECTION

The alternatives were evaluated against the following criteria, which are considered to be critical to the successful placement of the ETL.

#### 1. Logical Affinity

The organization in which the ETL is placed should have some logical affinity to the ETL. That is to say it should have some affinity to water and testing water. Typically the affinity would be functional, product-centric or customer-centric.

#### 2. Services Offered

Services provided by the ETL and the convenience for clients should be maintained or improved by ETL's organizational relationship. Note that we did not make an exhaustive study of clients' requirements during the study.

#### 3. Financial Viability

A placement that controls the net County cost (NCC) is important to the ongoing operation of the ETL.

#### 4. Space Considerations

The ETL needs space and a location that will enable it to operate and to be managed.

#### 5. Staff Attitudes

Staff approval or disagreement with the organizational placement of the ETL will make a difference, especially in any transition period.

#### 6. Support Services

The ETL needs support services such as finance and accounting, information technology, human resources, facilities maintenance and business development.

#### 7. Placement of Other County Laboratories

The placement of laboratories that provide similar services in other counties will give insights into their reasonings.

#### 8. Time and Difficulty of Implementing Change

The time and difficulty of making any transfer of the ETL will impact both the finances and the services of the laboratory.

#### 5. ASSESSMENT OF THE ALTERNATIVES

The four organizational alternatives identified in Section 3 above are assessed below.

#### 5.1 Retain the ETL in the ACWM

#### 1. Logical Affinity

To assess the logical affinity of the ETL with the ACWM we examined the history of the ETL and the ACWM's affinity to water

Our findings are set out below.

#### i. History

The ETL was established in 1973 in the Department of Health Services and moved to the ACWM in 1982. The primary justification for placement in ACWM appears to have been, at the time, a more sizeable workload for ACWM in the testing for pesticides and pesticide residues on produce. Since then, these issues have subsided and the ACWM no longer needs the laboratory for those purposes. However, the ETL has remained within the ACWM.

#### ii. Affinity to Water

The ACWM's ultimate mission is to protect the health and safety of the County's residents and improve the quality of the environment through the enforcement of Federal, State and local laws and regulations.

Within this broad mission, the ACWM is focused, in accordance with State and local requirements, on consumer and environmental protection providing leadership and direction in the successful eradication of serious pests, protecting the consumer from packaging, pricing and transaction fraud and from rising food prices due to increased pest control costs and decreased agricultural yields, the environment from increased pesticide application and the agricultural industry from increased costs for pest control. In particular, the ACWM engages in pest detection, pest eradication, pest management control, pest exclusion, seed inspection, nursery inspection, fruit and vegetable quality control, egg quality control, apiary inspection, crop statistics and phyto-sanitary certification.

The ACWM has done some studies on contaminants in water, but it is not an enforcement agency in regard to water quality standards, nor does it have regulatory authorities to mandate water quality or purity mitigations. The ETL does testing of storm and ground waters, soil, plants, food and pesticides but the majority of its work is on drinking water.

#### iii. Logical Affinity Conclusions

There is no doubt that water for irrigation has an affinity to agriculture and to the ACWM's overall mission. Thus, on this criterion alone, the ACWM may be a suitable organizational location for the ETL.

#### 2. Services Offered

The services that the ETL provides include tests for:

- Title 22 domestic water compliance
  - o General Minerals (e.g. total hardness, calcium, nitrate, fluoride)
  - o General Physical (e.g. pH, color, odor, turbidity, etc.)
  - o Inorganics (e.g. aluminum, arsenic, chromium, copper, lead, mercury, etc.)
  - o Bacteria (e.g. total and fecal coliform)
  - o Trihalomethone (EPA Method 524.2)
  - o Volatile Organics (EPA Method 524.2)
  - o Regulated Organic Chemicals (e.g. EPA Methods 504, 505, 507, 515.1, 531.1, 547)
  - O Unregulated Organic Chemicals (e.g. EPA Methods 524.2, 505, 507, 531.1)
- NPDES permit compliance (e.g. pH, coliform, chloride, nitrate, etc.)
- Hazardous materials evaluation
- Lead
- Pesticide residue testing.

The Environmental Toxicology Bureau is accredited by the California State Department of Public Health to test drinking water, waste water, hazardous waste, and agricultural products. The Laboratory is also accredited for lead analysis in dust wipe, soil, and paint chip by American Industrial Hygiene Association. It is one of the very few laboratories in California that is certified to test for pesticides, using the California Department of Food and Agriculture (CFA) 691 method.

To help in assessing the services offered by the ETL, the staff at the ETL provided us with:

- A list of the pricing methods and the number of matrices performed for each method each year for the four years 2006/7 to 2008/9 and 2010/11. The year 2009-10 was excluded because of potential inaccuracies due to implementation of the Laboratory Information Management System (LIMS).
- The number of each matrix performed each month from November 1, 2011, to October 31, 2012, taken from a LIMS report
- The number of each matrix performed for each client from November 1, 2011, to October 31, 2012, taken from a LIMS report.

We thus have several different numbers for the volume of matrices performed in a year. We mainly used the volumes based on the:

- average number of tests performed per year over the four years 2006/7 to 2008/9 and 2010/11
- number of matrices performed from November 1, 2011, to October 31,
   2012

This raw data is set out in Appendix II.

We analyzed the raw data, using the most appropriate volume figures, to calculate the:

- number of matrices that the ETL performs
- number of different matrices performed
- number of matrices by science, i.e. inorganic, organic, microbiological, biological
- number of matrices performed by type of sample, e.g. drinking water, water, food, plant, paint, etc.
- number of matrices performed by type of sample by month
- number of matrices by client
- services offered by selected other laboratories

The details of the analyses are shown in Appendix III and are summarized below. Please note that there are minor differences in the number of matrices performed (e.g. 44,696 and 44,698) due to figures being taken from different reports. For the purposes of this report the differences are insignificant.

#### i. Number of Matrices that the ETL Performs

Figures supplied to us show that the total number of tests carried out by the ETL has been:

Figure 5.1 – Total Number of Tests Carried Out Annually by ETL

Year	Total Number of Tests
2006-7	44,952
2007-8	45,825
2008-9	36,663
2010-11	38,777

While the figures above indicate that the total number of tests may be decreasing, our calculation of the total number of tests derived from LIMS data for November 1, 2011, to October 31, 2012, shows that 44,696 matrices were performed.

Furthermore, ETL's revenue, including intra-fund transfers, indicates up to a 20% variation between adjacent years but no trend in any direction, as shown in the table below.

Figure 5.2 – ETL's Annual Revenue

REVENUE	2011-12	2010-11	2009-10	2008-09
Intrafund Transfers				
Public Health	\$35,538	\$37,000	\$42,000	\$62,000
Coroner	\$0	\$0	\$0	\$0
Various	\$351	\$0	\$0	\$5,000
Revenue				
Public Works	\$918,035	\$838,000	\$1,017,000	\$879,000
Others	\$7,089	\$10,000	\$10,000	\$4,000
Fire Department	\$49,190	\$30,000	\$30,000	\$0
Total Revenues	\$1,010,203	\$915,000	\$1,099,000	\$950,000

From these figures it seems that the services offered, in total, are currently stable.

#### ii. Number of Different Matrices Performed

Analysis of LIMS data for the year November 1, 2011, to October 31, 2012, shows that 340 different matrices were performed. See the chart below. 36 of the matrices are sent out and performed by other laboratories.

Figure 5.3 - Number of Different Matrices Performed During a Year

#### iii. Number of Matrices by Science

Dividing the number of different tests into, inorganic, organic, microbiology and biology based on the figures derived from LIMS data for November 1, 2011, to October 31, 2012, produced the following result:

Figure 5.4 – Different Tests by Science for Nov 1, 2011 to Oct 31, 2012

Dividing the number of matrices performed in the same manner shows:

Figure 5.5 – Number of Matrices Performed by Science

Figures are shown in Appendix III.

#### iv. Number of Matrices Performed by Type of Sample

The number of matrices performed, according to LIMS data for the year November 1, 2011, to October 31, 2012, was as follows:

Figure 5.6 - Matrices Performed by Type of Sample

Type of Matrix	Number of Matrices	% of Total Matrices
Drinking Water	23,958	53.6%
Water (e.g. Storm)	16,475	36.9%
Waste Water	1,722	3.9%
Wipes	1,986	4.4%
Soil	375	0.84%
Food	103	0.23%
Miscellaneous	41	0.09%
Paint Chip	15	0.03%
Others	14	0.03%
Plant	4	0.01%
Paint	3	0.01%
Total	44,696	100.0%

Shown graphically the figures are:

Figure 5.7 – Matrices Performed by Type of Sample

Two tests on drinking water, for fecal coliform and total coliform, were performed 4,535 each during the year. A test for lead on wipes was done 1,981 times in the year.

#### v. Number of Matrices Performed by Type of Sample by Month

Further analysis of the LIMS data for the year November 1, 2011, to October 31, 2012, for the high volume matrices performed by type of sample and by month, see Appendix III and the table below, shows that the number of drinking water matrices performed each month is the most stable, varying from a low of 1,601 to a high of 2,386 per month, a variance of 49.0%. The most variable by month is storm water, which varies from a low per month of 186, in September 2012, to a high of 2,943 per month in November 2011, a 1,482% change.

Figure 5.8 - Number of Tests Performed each Month

#### vi. Number of Matrices By Client

Tests were performed for 15 different clients during the year from November 1, 2011 to October 31, 2012, as shown in the table below. The table and histogram show the number of matrices performed and the number of different matrices performed for each of the 15 clients.

Figure 5.9 – Number of Matrices by Client

	Client	Number of Matrices	Number of Different Matrices
PW-WW	Public Works Waterworks	22,752	97
PW-WM	Public Works Watershed Management	9,606	91
PW-WR	Public Works Water Resources	4,670	103
PW-SM	Public Works Sewer Maintenance	2,713	82
PW-FM	Public Works Flood Maintenance	197	9
PH-LD	Public Health - Lead	2,592	11
PH-SW	Public Health – Small Water	180	35
PH	Public Health	106	21

	Total	44,696	
SFS	Santa Fe Springs	3	3

It can be seen that 94.4%, 22,628, of the 23,958 matrices for drinking water are performed for the Department of Public Works – Waterworks. 94.5%, 15,561, of the 16,475 water matrices and 93.6%, 1,612, of the 1,722 waste water matrices are performed for the DPW. Practically all of the tests for lead on wipes are performed for the Department of Public Health.

#### viii. Services Offered Conclusions

The figures presented above show that the volume of tests done by the ETL is relatively constant, though it is affected by the weather and, in particular, by the extent of storms in Southern California. 26.7% of the tests are microbiological. Tests on drinking water comprise more than half of the tests performed and tests on storm water are more than another third.

The ETL has staff and equipment for a wide range of water testing methods and 340 different matrices are offered by the ETL. The ETL is proud that it provides a one-stop shop for its clients.

90% of the matrices are performed for the Department of Public Works. Hence, the ETL could be severely impacted by any change in the DPWs plans for toxicology laboratory services. The DPW already uses other laboratories, and the RFP it issued in 2012 with awards of major service contracts to three private laboratories is an indicator that the DPW will continue to do so.

The PHL offers some of the same services as ETL and there is also a laboratory in the ISD that offers a limited number of the same services. It was not within our terms of reference to make a recommendation on the testing of water in the County as a whole, but it seems logical to deduce that it is wasteful for the County to spend money on equipment and staff for another laboratory to do the same tests when higher volumes of tests in the ETL would increase its efficiency.

#### 3. Financial Viability

To assess the financial viability of the ETL, we used the raw data listed in Section 2 above and added:

- Annual budget and actual Net County Cost (NCC), including expenditure and revenue
- Current and drafted new Group III fee rates.

We reviewed the:

- Budget and Actual NCC
- Budget and Actual Expenditure
- Budget and Actual Revenue
- Fee Rates
- Fee Earning Capacity of the ETL.

Our findings are set out below.

#### i. Budget and Actual Net County Cost

#### **Net County Cost:**

There are two NCC's that are of interest to this project:

- a. The NCC if the ETL was transferred to a different Los Angeles County Department. This NCC includes full, allocated overheads, including those of the ETL, the ACWM and the County.
- b. The NCC if the work of the ETL was outsourced. The cost of the ETL above the cost of outsourcing is of particular interest.

#### NCC for Transfer

According to figures supplied to us, see Appendix II, the Net County Cost of the ETL is as shown in the table below:

Figure 5.12 – Actual Net County Cost of the ETL by Year

Year	Revenue	Net Expenditure	Net County Cost
2008-9	\$950,000	\$2,300,000	\$1,350,000
2009-10	\$1,099,000	\$2,330,000	\$1,231,000
2010-11	\$915,934	\$2,202,509	\$1,286,575
2011-12	\$1,010,203	\$2,322,817	\$1,312,614
Total	\$3,975,137	\$9,155,326	\$5,180,189

Revenue includes intra-fund transfers, which is revenue from County General Funded departments. The intra-fund transfers have varied between \$35,889 in 2011-12 and \$67,000 in 2008-9.

These figures do not include the full allocation of overheads for Administration and the County. If the full allocation of overheads is applied, the 2010-11 expenditure rises from \$2,202,509 to \$2,977,798, and from \$2,322,817 to \$2,982,525 in 2011-12, without increases in revenue. Hence the Net County Cost for the ETL for 2010-11 becomes \$2,061,864, and for 2011-12 becomes \$1,972,322.

Thus, about \$2 million per year is the NCC that needs to be considered in any transfer of the ETL to another Los Angeles County Department. However, discussions with the County's Chief Executive Office indicated that any transfer of the ETL to another Department may be made financially neutral, with the ACWM carrying the NCC for an indefinite period.

#### **Net County Cost with Outsourcing**

To calculate the NCC if ETL's services were replaced with those of private laboratories, we first calculated the ETL's revenue from testing services and then the cost if outside laboratories provided those services.

We have been provided with the main current fee rates, called Group III rates, the number of tests performed in four of the years from 2006-07 to 2010-11, and the actual revenue figures in the accounts for the years 2008-09 to 2011-12. The actual revenue figures, including intra-fund transfers, are compared below to the revenue calculated from current fee rates and the number of tests.

Figure 5.13 – Calculated Revenue and Actual Revenue

	2008-09	2010-11
Calculated Totals	\$668,159.45	\$715,132.86
Actual Revenue	\$950,000.00	\$915,000.00

It can be seen that the actual revenue in the annual accounts is 42.2% and 27.9% greater than the calculated revenue. Though there are no supporting figures available, we are assured that the reasons for the differences are:

- 1. The tests were billed based on the client's group rates whereas the calculated total above is based on Group III. There are four group rates in total currently. Group I is for DPH and ISD. Group II is for the State. Group III is for other county agencies. Group IV is for the city agencies.
- 2. Some tests were Rush, and they were charged 28% more.
- 3. By agreement with the clients, the field sample collections were charged for mileage and sampling time.
- 4. Some consulting services were charged by agreement, for example, permit reporting writing and field equipment calibration.
- 5. Some laboratory supplies/materials were ordered for the clients for their field work.

6. The sent-out tests were also billed mileage and handling fees.

If we use the volume of matrices performed in the ETL, excluding those sent out, from November 1, 2011 through October 31, 2012, and calculate the total fees for both the ETL and outsourcing, add the average of 42.2% and 27.9%, which is 35%, for the six reasons listed above, we obtain the results shown in the table below. Details for each test are shown in Appendix III. The fee rates for outside services are those provided to us, based on a survey of six laboratories over the period 2010 to early 2012.

Figure 5.14 – Estimate of Outsourcing Cost

	ETL Gp. III	Minimum Average		Maximum	ETL Planned
	Rate	Outsource	Outsource	Outsource	New Rate
	Revenue	Rate Fees	Rate Fees	Rate Fees	Revenue
Total Fees	\$839,901.49	\$870,666.24	\$1,154,233.87	\$1,565,227.24	\$1,295,101.05
35% for Other Services	\$293,965.52	\$304,733.18	\$403,981.86	\$547,829.53	\$453,285.37
Total Fees	\$1,133,867.01	\$1,175,399.42	\$1,558,215.73	\$2,113,056.77	\$1,748,386.42

It can be seen that the cost of outsourcing the tests would be between \$1,175,399 and \$2,113,057, but probably about \$1,558,215. However, these figures may not be accurate. Differences in methods, numbers and arrival patterns of samples make accurate estimation of outsourcing extremely difficult within the timescale allowed for this study. For the purposes of this report, we shall take about \$1,500,000, plus reduced County overheads, as the cost of outsourcing.

#### Net County Cost of the ETL above Outsourcing

With full overheads, the cost of the ETL in 2010-11 and 2011-12 was almost \$3 million. Comparing this with the direct cost of \$1.5 million for outsourced services would imply a saving of about \$1.5 million. However, this would require the County to cut out about \$700,000 in ACWM and County overheads.

The overheads associated with the ACWM and the County are unlikely to be significantly reduced wherever the ETL is placed, though the overheads may be allocated to another bureau or Department. Thus, it is more realistic to compare the cost of outsourcing with the ETL expenditure. Then, the extra cost to the County of having the services performed by ETL at about \$2,250,000 rather than outside laboratories at about \$1,500,000 is about \$750,000.

#### **Budget and Actual NCC:**

Each year the ACWM prepares a budget for the ETL. The approved budget Net County Cost and the actual Net County Cost are shown in the table below:

Figure 5.15 – Net County Cost Budget and Actual Figures

Year	Budget	Actual	Difference	% Difference
2010-11	\$851,000	\$1,287,000	\$436,000	51.2%
2011-12	\$993,000	\$1,188,479	\$195,479	19.7%
Total		\$5,056,479		

It can be seen that there is a significant difference between the budgeted NCC and the actual NCC, excluding full overheads.

#### ii. Budget and Actual Expenditure

The budget and actual expenditure for the past two years are shown below:

Figure 5.16 - Budget and Actual Expenditure Figures

Year	Budget	Actual	Difference	% Difference
2010-11	\$2,401,000	\$2,165,000	\$236,000	9.8%
2011-12	\$2,453,000	\$2,162,793	\$290,207	11.8%

The actual expenditure is less than the budgeted expenditure by about 10% each year. We believe that this is in large part due to budgeting for 23 positions when only 18 are filled. The staffed positions are listed in Appendix IX.

#### iii. Budget and Actual Revenue

The budget and actual revenue, including intra-fund transfers, for the past two years are shown in the Table below:

Figure 5.17 – Budget and Actual Revenue Figures

Year	Budget	Actual	Difference	% Difference
2010-11	\$1,651,000	\$915,000	\$736,000	44.6%
2011-12	\$1,561,000	\$1,010,203	\$550,797	35.3%

Not only are there significant differences between the budget and actual figures, but the budgeting process does not place sufficient accountability for the results of the ETL with the staff at the ETL.

#### iv. Fee Rates

ETL's fee rates have not been changed in 10 years. The April 17, 2012, report to the Board mentioned that rates being charged for a variety of tests are lower than industry standards and may not be reflective of actual costs for the testing processes. The report set out a number of reasons why reviews of charge rates were not completed. The report concluded that some increases are achievable that may serve to diminish the NCC associated with the operation of the ETL.

#### **Basis for Draft New Fee Rates**

The draft new fee rates are based on the cost of performing the services. The costs of services has been calculated by staff at the ETL, under instructions from the County, from the time it takes laboratory assistants, technologists, toxicology chemists, senior toxicology chemists and supervisors to perform a test and the equipment used. The costs of services and supplies supporting the tests are added. The calculated costs were compared to the average fee rates for the six outside laboratories for which fees were gathered during the period from 2010 to early 2012.

However, the time taken by staff and the time for which the equipment is used is highly dependent on the number of matrices performed at the same time. For the most part, the calculation of cost was done assuming that a batch of 10 was tested at the same time.

Based on the figures we obtained from the LIMS for the year from November 1, 2011, to October 31, 2012, see Figure 5.3 above and Appendix III, 33 of the matrices were performed only once during the year, including 27 of the 72 different waste water matrices

121 of the matrices were performed less than once a month on average, that is, less than 12 times during the year, including 34 of the 106 different drinking water matrices, 15 of the different 117 storm water matrices, and 51 of the 72 different waste water matrices.

176 of the 340 matrices were performed less than once a week on average, that is, less than 52 times during the year, including 74 of the 106 different drinking water matrices, 25 of the different 117 storm water matrices, and 52 of the 72 different waste water matrices.

Only 29 matrices are performed more than once a day on average.

It is therefore reasonable to deduce that the method of calculating the cost for most of the tests performed is inaccurate. For example, when a single test is performed, it usually costs far more than one-tenth of the cost of performing ten tests. Furthermore, the work of calculating costs by measuring the time taken to do tests, which vary in number day by day, is onerous. The senior staff at the ETL agree that the calculated costs on which the draft new fee rates are based are approximate.

Not only are the results of the process inaccurate but the new draft fee rates calculated do not cover the cost of the ETL. After calculating the costs, the rates have to be compared to those of competitive laboratories. As we would expect and as the clients that we have spoken to confirm, the clients are concerned that they are not paying the ETL more than they would pay other laboratories for the same services. Thus ETL cannot charge calculated fee rates if they are not competitive. Furthermore, agreements in place with existing clients may limit the rate at which fees can be raised.

#### **Elimination of Uneconomic Services**

As described immediately above and shown in Figure 5.3, the vast majority of the tests performed are carried out infrequently. So infrequently, that they are likely to cost more than the revenue they generate, even with new fee rates.

#### Revenue with New Fee Rates

Using an average of the number of tests performed over the four of the years in the period 2006-7 to 2010-11, 16 Price Methods account for 31,678 matrices, and about half (\$505,951) of the revenue in 2011-12 at current fee rates. At the draft new fee rates and the same volumes, these 16 methods would generate \$759,439, a 50% increase in revenue, as shown in the table below.

Figure 5.18 – Top Revenue Earning Methods

	Test Price Group	Price Method	Average Tests Per Year	Gp. III	Planned New Rate	Gp III Revenue	Planned New Rate Revenue
1	Colilert (Bacteria Presence/Absence)	SM 9223	5409	\$15.43	\$24.50	\$83,460.87	\$132,520.50

9	Color	SM 2120B	1430	\$7.54	\$11.39	\$10,782.20	\$16,287.70
10	pH	SM 4500 HB	1225	\$4.64	\$13.77	\$5,684.00	\$16,868.25
11	THM, GC/MS (EPA 524.2) + MTBE	EPA 524.2	807	\$26.55	\$49.97	\$21,425.85	\$40,325,79
12	Fecal Coliform (SM 9221)	SM 9221	759	\$25.59	\$35.10	\$19,422.81	\$26,640.90
13	Total Coliform (SM 9221)	SM 9221	718	\$25.59	\$43.76	\$18,373.62	\$31,419.68
14	Total Suspended Solids-TSS	SM 2540D	589	\$9.64	\$22.96	\$5,677.96	\$13,523.44
15	Total Dissolved Solids-TDS	SM 2540	569	\$9.64	\$21.46	\$5,485.16	\$12,210.74
16	Heterotrophic Plate Counts (HPC)	IDEXX SimPlate	532	\$6.55	\$22.76	\$3,484.60	\$12,108.32
		TOTALS	31678			\$505,950.75	\$759,439.15

Overall, at the same volume, the 85 pricing methods at draft new fee rates will generate a 46.1% increase in revenue from tests, excluding sampling fees, over the current Group III rates, as shown below and in Appendix III.

Figure 5.19 – Revenue at Current and Draft New Fee Rates

	Gp. III Rate Revenue	Draft New Rate Revenue
Revenue	\$858,082.27	\$1,253,478.81
% of Gp.III Revenue		146.1%

We applied the current and the draft new fee rates to the volume of analyses done by the ETL during the November 1, 2011, to October 31, 2012, year in order to calculate the total fee-based revenue that would have been generated, assuming no loss of business. The revenue changed as shown in the table below:

Figure 5.20 – Revenue at Current and Draft New Fee Rates

	Number of Matrices	Revenue at Current Fees	Revenue at Draft new Fees
Volume Average of 4 Years	41,652	\$858,082	\$1,253,478
Volume 11/1/2011 to 10/31/2012	44,033	\$839,901	\$1,295,101

Due to the composition of the tests performed, the revenue at current fee rates goes down by about \$20,000, 2.1%, between the average of four of the years in the period 2006-7 to 2010-11 and the year November 1, 2011, to October 31, 2012, even though 5.9%, 2,741, more tests were performed.

This also indicates that the current average fee for the tests performed reduced from \$20.65 to \$19.07, but that, at the draft new fee rates, the average fee for the tests performed reduced from \$30.16 to \$29.41, despite a 3.2% increase in revenue.

The new, higher revenue does not cover the costs of the ETL, even without the full allocation of overheads.

#### v. Fee Earning Capacity

In addition to the above "what-if" calculations on rates, we also considered the capacity of the ETL to handle a higher volume of tests and thus earn more revenue.

It can be seen from Figure 5.5 above, showing the number of tests performed by month during the year November 1, 2011, to October 31, 2012, that there are some months when the ETL handles a higher number of tests than in other months. Sometimes it is necessary for the staff to work overtime to accomplish the tests in the higher volume months.

It is difficult to assess what capacity the laboratory has for performing tests and earning revenue because the capacity is so dependent on which matrices are performed and the number done at any one time. The senior staff at the ETL estimate that more matrices could be done, particularly if the five vacant positions were filled and staff upgraded as vacancies occurred.

It is noticeable that there is little or no proactive business development done by the ETL to increase the revenue. All the staff are busy carrying out the current work of the ETL and nobody is in a position to engage in business development within or outside the County. Furthermore, the philosophy at the ETL is that it is not the purpose of a County laboratory to compete with private laboratories.

However, the ETL did respond to an RFP issued by the Department of Public Works (DPW) on March 26, 2012, for As-Needed Environmental Laboratory Services Program. The total aggregate annual contract amount of the Program was estimated at \$2 million. The ETL submitted a document on April 23, 2012, in response to the RFP that, in the covering letter, stated, "Unfortunately, we are in the process of developing our new rates which has not updated since 2002. Our Department will not permit

us to submit any official proposal until the process of rate update is complete. Since both our Departments fall within the County of Los Angeles, may I request to submit our proposal for considering us through a DSO setting?"

At that time the ETL Management team was reviewing and revising the rate time study as a priority since, as the ETL's April 2012 Monthly Report states, "the Lab is unable to bid for any County Department contracts due to the decade old rate."

According to the ETL's Monthly Report, in January 2012, the ETL did a confirmation study that month on the time study to ensure that everything is correct for the rate adjustments for services performed by the Lab. The corrections were returned to the Business division with explanations and sound justifications for further processing. The ETL was targeting to complete the lab test rate adjustments before the new fiscal year begins.

In February, 2012 the ETL Monthly Report stated that, "the new rate study has been submitted to Budget and Fiscal for final review before submission to the County Auditor-Controller."

In March 2012, the ETL was in the final reviewing stages of the rate study to make sure that all studies were correctly and accurately reflected in the new rate development.

In April, the response to DPW's RFP was submitted.

The May Monthly Report stated that the Environmental Toxicology Laboratory was able to review and finalize the accuracy of the time study with all of its analysts. The time study was sent to the ACWM Budget and Financial Services Division for further processing. The Lab hoped to have the rates completed by the fiscal year's end because the implementation of new rates may help the Lab compensate the gap within its budget.

In June, July and August 2012, the Monthly Reports did not mention the time study or fee rates.

On September 4, 2012, the Board of Supervisors approved awards of the DPW contract to three private laboratories.

As of the date of this report, January 2013, the new fee rates for the ETL have still not been approved. The simple reason for this is that the draft new fee rates do not cover the cost of the ETL.

It should be noted that, in response to the question, "Can you provide the actual annual spend for the current contracts under this program?" during the period between the issue of the RFP and the responses being required, the DPW answered, "The amounts spent for the last contracts are:

Initial Term	\$306,247
Option Year 1	\$141,641
Option Year 2	\$262,912
Option Year 3 (in progress)	\$95,030"

Furthermore, it is possible that the ETL could still obtain some of the business under the program through the Departmental Service Order (DSO) system. The RFP requests "as-needed environmental laboratory services" and it is probable that a DSO could step in front of as-needed requirements.

#### vi. Financial Viability Conclusions

The figures show that there is an imbalance between the expenditure on the ETL and its revenue. This imbalance may be necessary for the public good, but it needs to be recognized and approved by the County so that realistic budgets can be developed.

The Net County Cost could be diminished if:

- the volume of analyses is increased, without proportionately increasing staff
- the fee rates charged for the analyses are increased, and there is no loss of volume
- the expenditure is reduced.

We estimate that there is a large market for ETL's services both within the County and outside with other public organizations. However, the ETL has little or no business development capability. The fact that the DPW issued an RFP for \$2 million per year of environmental laboratory services to which the ETL is unable to respond should be a serious concern.

There are plans to increase fee rates, but the process for drafting potential new fee rates needs improvement. We understand that the County does not intend to make a profit from its services, but the process used has produced draft new fee rates that do not cover the cost of the ETL, taken considerable staff time and is currently causing the ETL to lose business.

Reducing expenditure is more difficult due to the needs for certifications and specialized equipment. To reduce expenditure, the number of different matrices performed would need to be rationalized, based on more in-depth study than is appropriate here. Some uneconomic services would need to

be terminated or outsourced. A severe rationalization would only be appropriate if the ETL joined with another laboratory.

The budget process also needs to be revised to make the budget figures more realistic and to make ETL fully accountable for its own budget.

#### 4. Space Considerations

If the ETL stays within the ACWM organization, there are three possibilities for its physical location and space requirements:

- Leave the ETL As It Is
- Refurbish the Current Facilities
- Relocate to a Building in a Different Area

These possibilities are examined below:

#### i. Leave the ETL As It Is

It appears that the ETL's existing facility adequately accommodates the level and volume of testing requested by their customers. It also meets the regulatory requirements for approval of State and Federal agencies. The second floor, where the majority of the testing takes place, is accessible by elevator making this floor available to disabled customers and staff. The only negative at this location is the placement of the Lead Laboratory and Multiple Elements Laboratory on the ground floor. This is not a major issue in terms of testing because these two laboratories tend to be self-sufficient.

The second floor of the building as laid out allows for the staff to work efficiently with minimum disruption or inconvenience. The Organic and Inorganic laboratories are located on opposite sides of the floor with all the support functions centralized between them. This allows for an efficient use of space and a minimum of travel to each of the support functions. Because the floor is configured in this manner it allows for minimum corridors (circulation) thus maximizing the useable square footage. A currently budgeted and scheduled renovation project for January-February 2013, would correct the most pressing requirements for fume and ventilation hood replacement, sink and sink-cabinet replacement, gas-valve replacement, and autoclave room improvements. Thus the ETL could remain in this facility and continue to operate at the current acceptable level for the foreseeable future.

#### ii. Refurbish the Current Facilities

The current facility is over 20 years old and although it continues to function adequately many of the building components and systems may have reached the end of their life span. Below are recommendations for the possible refurbishment of the ETL:

- a. The current lay in ceiling tiles are stained and broken in areas and should be removed and replaced. It is unknown whether some or all of these tiles have been stained by interior piping leaks or exterior roof leaks.
- b. The air conditioning supply and return grilles are also stained or deteriorated.
- c. The scope of work for finish repair or replacement and roof repair or replacement can be done in tandem with improving the gas storage system and the upgrade/repair of the piping for the gasses that will occur above the ceiling. If any upgrading or replacement of the IT system is being considered, this would be the ideal time to implement this scope along with any re-cabling for phones and computers that may be required.
- d. The lighting is old and inefficient. By replacing these with new fixtures and switching, the operating costs for the Lab would be reduced.
- e. New equipment such as eye wash units, sinks and faucets should be installed which again are more efficient and easier to operate.
- f. The existing exhaust hoods are in the process of being replaced or upgraded.
- g. Several package air-conditioning units have been installed where the heat loads have increased with the installation of new laboratory equipment. A general review of the existing HVAC system should take place to review the adequacy, functionality, and condition of the existing system.
- h. A review of the current electrical infrastructure should also take place. Indications were that the system is adequate but the review should take place none the less to determine remaining life expectancy. The existing emergency generator has not been functioning for over 10 years. A temporary generator is brought to the site in a timely manner in the event there is a power outage. This has only been necessary on two occasions in the past ten years.

- i. To our knowledge, the current vacuum pumps and air compressors are functioning within normal parameters.
- j. The restrooms should be updated with more current water-saving fixtures and accessories.
- k. The existing sheet vinyl flooring is old and has been patched in several locations and therefore should be replaced.
- 1. All the current finishes including paint, window blinds and other flooring should be updated.
- m. In order to provide additional laboratory space at the current ETL, several storage functions, for example, records and secure chemical storage, should be considered for relocation to the adjacent warehouse, allowing the space to be re-purposed for the Inorganic Laboratory.
- n. The Administration area could be reconfigured, reducing its footprint and allowing the Organic Laboratory some additional space. Again because of the current layout of the laboratory and support functions, this modification would be of minimum disruption to the operations.

The refurbishments could cost up to \$1.5 million, in addition to more than \$500,000 work already planned for January to March, 2013.

Should the five open positions be filled, there is a vacant office ready for the Deputy-Director: note that "Deputy Director" is the ACWM title previously and currently given to the Director of the ETL. The Senior Chemist position is for the Organic Laboratory. This person could have a desk against the wall, or, with some reconfiguration, a cubicle. The two Chemists positions are one for Organic and one for Inorganic, and they would be located at the benches in each laboratory. There is one vacant position in each. The final open position is for a Laboratory Assistant who would be a "floater".

# iii. Relocate to a Building in a Different Area

Relocating to another County Owned building may give the ETL the opportunity to move into a new facility and allow all the laboratories, including the Lead Laboratory and Multiple Elements Laboratory, to be contiguous. The site will need to allow for staff parking and accommodate the drop off and pick up of samples by their customers. The costs to build out the laboratories and support functions in another location would be significant due to the infrastructure needed for the lab operations.

The ETL would be relocated to an existing facility on County-owned land, thus eliminating the one-time cost to purchase land and on-going costs to rent space. The utilities available on the relocation site would need to be adequate to support the lab functions. The shell and core of the facility would need to be adequate to support the lab functions in terms of configuration, accessibility, and structural capacity. Existing fixtures, furniture, and equipment could be relocated from the current ETL. Emergency power will need to be addressed. Our estimate is that a new building on County-owned land would cost between \$10 and \$13 million, comprising:

Programming, Planning, Design, Construction Documents: \$1-1.5 million
Construction: \$8-10 million
Soft Costs: \$1-1.5 million
Total Conceptual Project Budget: \$10-13 Million

This includes ISD fees, permits, fees, development studies, moving costs but excludes new fixtures, furniture & equipment and instrumentation.

#### 5. Staff Attitudes

The Chief of Environmental Toxicology, the two Supervisors and the 15 staff at the ETL work diligently to satisfy the clients and produce test results with the required accuracy within the time allowed for the tests.

Discussions with clients have indicated that, in every respect, the services provided by the staff are appreciated and satisfactory. The latest Customer Satisfaction Survey, sent out on November 6, 2012, currently has 79 Very Satisfied, 20 Satisfied and zero responses less than satisfied from 13 respondents in DPW and DPH. Many of the written in comments emphasized how very satisfied the respondents were and showed appreciation for the staff.

The staff at the ETL recognize that they have the modern equipment to do more advanced testing than many other laboratories, but they also realize that the gap between revenue and expenditure, poor business development capabilities and the fact that the ETL has been without a Deputy Director for more than four years indicate a lack of leadership from the Department.

Furthermore, the staff realize that there is nobody within the ACWM politically active to obtain business from other County departments for the ETL. For example, they feel that they are losing business with the Fire Department because ISD is more active in its political relationships. They see counties, such as Orange County, where all the water testing is done in a single laboratory.

Overall, the staff are realistic and keen to support strong leadership that will make a change for the better within a reasonable time frame.

# 6. Support Services

The support services that the ETL requires are largely provided by ACWM and by Los Angeles County Internal Services Division (ISD). In general, the support services are slow, as they are in other County departments, but they enable the ETL to operate.

#### **Human Resources**

Promotion, the use of interns and the old-fashioned titles that are given to the staff are among the Human Resource issues. The titles make recruitment difficult and do not help the staff when attending external meetings.

# Information Technology

ACWM Information Technology (IT) support is off-site and allocated to ETL on Thursday and every other Friday. However, due to holidays, vacations and other distractions, it seems to the system users that support is not always provided as scheduled.

The ACWM has nine IT staff for a Department of about 400 staff – a ratio of approximately 1:44. The Department, including the ETL, has a Microsoft Windows operating system that is three generations behind the current one, uses Microsoft Office 2003 instead of Office 2007 or Office 2010, and ETL still uses Word Perfect for some of its forms. An update of Microsoft software is planned for early 2013. As a general rule, well supported systems have about one help desk person for every 50 users, in addition to network, communications, applications and other staff.

The Laboratory Information Management System (LIMS) has not been fully implemented. The software provider, Chemware, recommends an on-site, 0.75 FTE LIMS Administrator. Though ETL receives its share of the Department's IT resources based on the number of staff, and is able to operate its IT systems, the shortage of support creates problems, for example:

- when there are problems interfacing with clients, prompt resolutions of the problems are required, which is not helped by having to phone the off-site IT support who have variable response times. Reports not producing the desired results and uploads of laboratory results to DPW not working due to software issues are examples of problems that have occurred. In the first survey of 2012, the difficulties with the upload to DPW caused the Customer Satisfaction Survey to receive a response of Very Unsatisfied.
- orders for the collection of samples are printed with a bar code, but the bar code cannot be scanned when the samples are received because the appropriate software module has not been implemented. The software

does work but not in a manner that the ETL can use. The ETL staff have to enter the data again manually, into a window that sits in a corner of the screen instead of filling the screen. This issue has been on the LIMS Troubleshooting Tracking Sheet for two years, but we understand that one of the reasons a solution has been delayed is that, around early 2011, the CEO's office put a moratorium on new software purchases.

- training on LIMS functions is not readily available without losing time for other support
- IT staff who support LIMS once a week need time to remember the point at which they stopped last week, thus reducing the effectiveness of the day.

In our experience, such problems are not unusual across the broad spectrum of IT installations, but support could be improved.

#### Maintenance of Facilities

Our general impression is that the laboratory premises are being maintained so that they function. The premises look outdated and this gives an initial impression that the laboratory work and equipment could also be behind the times. This is not so, but it could make business development more difficult when potential clients wish to see the laboratory.

The roof has had many leaks as indicated by the level of discolored tiles throughout the 2<sup>nd</sup> floor though some of the leaks are from piping and not from the roof. Items of standard repair when requested such as new lamping in light fixtures, leaks in pipes to the sinks, etc., appear to get fixed in a timely manner by ISD. Carpet cleaning is adequate.

Major items of repair such as a new roof or the emergency generator are put off for budget reasons more than any other, or, in the case of the generator, never repaired. The piping system for several gasses is not being utilized due to leaks in the valves. The interim solution is to provide tanks at the benches, which is not the ideal solution from a practical, space or safety point of view. The restrooms appear to have been maintained fairly well, none of the fixtures or partitions are in disrepair. The sheet vinyl flooring throughout is old but in most cases its integrity has not been compromised.

The lab has been inspected and certified by several agencies every two years, including the Federal American Industry Hygiene Association (AIHA), and State of California Environmental Lab Accreditation Program (ELAP). Therefore the observed deficiencies have not prevented ETL from functioning at a level that is acceptable to the leading accrediting agencies.

The mechanical system was reworked approximately 4 years ago and appears to provide adequate heating and cooling in most areas. Where heat is concentrated, such as in the Extraction and Spectrum laboratories, separate split-system air conditioning units are utilized. In our experience, HVAC and electrical systems have a life expectancy of 15+/- years, even with regular maintenance. That would suggest that the ETL, which was built in 1990 in its current location, could need some significant additional HVAC and electrical work in the next 3-5 years.

The ETL is scheduled for some refurbishment which is to take place in several phases beginning in late January and lasting into March, 2013. The refurbishments are to include 12 new exhaust hoods, sinks and counters and plumbing connections along with a larger hood, ceiling, and wall repairs in the Autoclave room on the 1st floor. These scheduled refurbishments are expected to cost in excess of \$500,000.

# 7. Placement of Other County Laboratories

We are not aware that any other local county has a laboratory in an agricultural department.

# 8. Time and Difficulty of Implementing Change

There are four alternatives available to the ACWM:

- Maintain the status quo
- Maintain the Current Placement of the ETL within the ACWM but Revitalize the Direction
- Transfer the ETL to Another ACWM Bureau
- Redefine the Roles of ETL and PHL and Transfer PHL's Microbiological Water Testing to ETL

These alternatives are examined below.

# 1. Maintain the status quo

For the purposes of this study, maintaining the status quo does not require time and, because no changes will be implemented, there are no relevant difficulties. However, we anticipate that without revitalizing the direction of the ETL, as in alternative 2 immediately below, at some point in the future an event will trigger a decision to close down the ETL. We have therefore not considered this alternative further, preferring alternative 2 or 4 below.

# 2. Maintain the Current Placement of the ETL within the ACWM but Revitalize the Direction

Revitalization of the ETL's direction will require a clarified vision, a new Mission Statement, the appointment of a Deputy Director to lead the ETL, the development of a strategic plan and means of ensuring that the ETL secures new business that benefits the County.

Although we have not studied the market for ETL's services in any detail, it appears that there is more than enough demand for efficient toxicology testing of water and other substances that the ETL could do. In particular, to mention just a few high-level tasks, a revitalized ETL would:

- work closely with its clients to determine their long-term environmental toxicology testing needs and adjust its staffing, certifications and purchases of equipment accordingly
- prepare a strategic plan that sets out a clear vision, that relates to its clients needs and is supported by the staff, a new Mission Statement and steps to achieve the objectives that the plan defines
- become politically active within Los Angeles County to capture, or at least be considered for, all of the County's needs for testing that the ETL can do. We would expect that no County department would issue an RFP for testing that the ETL could do, without first consulting the ETL. In most cases, it should be the ETL that issues the RFP, if needed, to ensure that the client department obtains the environmental toxicology testing services that it needs. As a backup, we would also expect that the Board of Supervisors would not award contracts to outside toxicology testing laboratories without consulting the ETL and considering how satisfactory provision of the services could be arranged at minimum cost to the County
- adjust its fee rates using a more sophisticated pricing algorithm than basing fees on a process that does not produce adoptable new fee rates
- rationalize its services, as a result of which select, infrequently required services, whose costs exceeded revenues and which do not unduly impact important clients, would be sent out to other laboratories
- establish annual budgets and an acceptable Net County Cost that bear a close relationship to the results that will be achieved and for which staff at the ETL will be accountable

negotiate with DPH and ISD a logical distribution of water testing within the County, so that the service is most effective and the costs are minimized. Competing and overlapping services should bear particular scrutiny to determine if they serve the best interests of the County as a whole.

Practically all of these tasks could be the work of a Deputy Director in charge of the ETL.

#### 3. Transfer the ETL to Another ACWM Bureau

The organizational chart of the ACWM shows that the department has an Environmental Protection Bureau, which, if only in regard to its name, could be a location for the ETL.

The bureau's functions include Pest Eradication, Red Imported Fire Ant/AHB and Pest Detection, Fruit Fly Trapping in accordance with the main focus of the ACWM. While there is no doubt that pest eradication and pest detection does protect the environment, so does ensuring the quality of water and the other services that the ETL provides.

The main reason for transferring the ETL to another ACWM bureau would be to give the ETL a Deputy Director who would quickly direct the ETL proactively and take the measures outlined under Point 2 immediately above. However, the ACWM needs to focus on its current main programs to which the ETL does not contribute significantly. Hence, transferring the ETL to another ACWM bureau is unlikely to bring about the changes required.

# 4. Redefine the Roles of ETL and PHL and Transfer PHL's Microbiological Water Testing to ETL

Although the work of the PHL and the ISD laboratories have not yet been discussed in this report, the next section will show that the PHL also provides microbiology services for testing water. In combination with revitalizing the direction of the ETL, rationalization of the current situation so that the County does not have more than one laboratory doing the same types of work could benefit the ETL from the transfer of PHL's water testing work to ETL.

However, this change should be accompanied by a campaign to inform all County departments about ETL's testing services. We were informed by other county departments that they did not use some of ETL's services because they were not fully acquainted with the services that ETL could provide.

#### 5.2 Transfer the ETL to the DPH

## 1. Logical Affinity

The Department of Public Health, under a different name, is the Department in which the ETL was originally born. It has many divisions, of which the most relevant to the ETL placement are the Communicable Disease Control and Prevention Division and the Environmental Health Division. The Communicable Disease Control and Prevention Division has a microbiology laboratory – the Public Health Laboratory (PHL). The Environmental Health Division has a Bureau of Environmental Protection and a Bureau of Toxicology and Environmental Assessment, both of which have requirements for tests which the ETL could satisfy.

The PHL's organization includes the following sections: Molecular Biology (Pulsed-Field Gel Electrophoresis technology), General Bacteriology (includes food microbiology and botulism testing), Mycobacteriology and Mycology, Parasitology, Virology (includes opening and autopsy of animal heads for rabies testing), human Serology, Food, Dairy and Water Microbiology, Lead (human) and Support Services. All staff members testing and reporting laboratory results hold certificates from the State of California as public health microbiologists. The remainder of the staff are laboratory assistants and support personnel.

Affinity analysis shows that water has a close association with human health. Documents from the Department of Public Health confirm the affinity, for example:

- In its September 21, 2012 Mission Statement the DPH says, "The PHL provides laboratory support for other divisions and programs within the Department of Public Health (DPH) involving their missions to improve the safety of environmental resources, reduce exposure to contaminants and pollutants, and reduce transmission of communicable diseases among the general population."
- In its Mission Statement the PHL says, "The PHL also provides laboratory support for other divisions and programs within the Department of Public Health (DPH) involving their missions to improve the safety of environmental resources ......"
- The PHL has a draft Strategic Plan titled, "Strategic Plan 0211-2016". The plan includes Strategic Priority 4: Expansion Of Comprehensive Public Health Laboratory Services. Under that priority, Objective 4.2 is, "Enhance environmental chemistry testing services to include chemical analysis of drinking water and additional surveillance analyses of environmental hazards to community health."

The Bureau of Environmental Protection in the Public Health Department is comprised of seven, very technical, specialty programs: Cross Connections and Water Pollution Control, Drinking Water, Emergency Preparedness & Response, Land Use, Radiation Management, Recreational Waters, and Solid Waste Management. In relation to the drinking water program they monitor wells and small water systems, which includes collecting water samples from small water systems to monitor the levels of bacteria, chemicals, and other elements set forth in the State Drinking Water Standards.

Further evidence of DPH's affinity to water is included in Appendix V – General Information Relating to DPH.

# **Logical Affinity Conclusions**

There is no doubt that water has an affinity to public health and to the work and objectives of the Department of Public Health. Thus, on this criterion alone, the DPH is a suitable organizational location for the ETL.

# 2. Services Offered

The Department of Public Health has its own laboratory, PHL, which employs about 115 staff and offers a variety of testing and reference microbiologic assays to detect and identify bacterial, viral, parasitic, and fungal pathogens of public health importance and clinical significance. PHL also performs applied research activities as needed for method development related to innovative laboratory services essential for the detection, epidemiologic investigation, control, and prevention of communicable diseases and disease-related outbreaks associated with human illness, adulterated foods, contaminated water, or non-sterile medical devices and biologicals.

The PHL provides Colilert®, Enterolert®, MTF Confirm, Heterotrophic Plate Count, Fecal Coliform, Enterococci and MTF Presumptive tests on water. Most of the tests, 5,074 out of a total of 5,248 water tests in 2011, are Colilert-18® and Enterolert®, and are performed on samples of recreational water and samples taken from the PHL's own water system. For example, the PHL tests weekly water samples from 46 points along the County's beaches, provided to it by the Environmental Health Division of DPH.

Thus, there is some overlap with the tests offered by the ETL, who also do Colilert-18® tests and tests for enterococci, but also do many more microbiological, as well as chemical, tests on water.

Though the PHL has the capability to do some chemical tests it does not test for chemicals at the present time. Other divisions within the DPH, such as the

Toxicology and Environmental Assessment Division in the Environmental Health Division, would use the PHL for chemical testing if it offered the service.

It seems that the DPH would improve its services if it was also able to do routine testing of chemicals, and that the County would benefit from reducing the duplication in services provided by the PHL and ETL. However, it has to be recognized that adding routine chemical testing capabilities to the PHL's services would not be as straightforward as it may sound. The sciences of chemistry and microbiology are different, different certifications are required, and different clients are served. Thus, the PHL would need to develop new capabilities to manage the ETL if the two laboratories were combined, which would not be very different from placing the ETL in any of the DPH's divisions.

# 3. Financial Viability

A few years ago, the annual operating budget for the (PHL) laboratory was \$14.3 million of which \$9.3 million represented the Net County Cost (NCC). The PHL NCC was less than its expenditure due to the receipt of nearly \$5 million in grant funds annually. Over the last two years the target NCC for the PHL has been cut to \$7.1 million. One year the PHL exceeded its target NCC and last year it finished with a similar amount below the target NCC. The PHL actively endeavors to meet its NCC target each year. Staff, the Assistant Director in particular, visit clients to develop business. The staff at the PHL take responsibility for meeting their own budget.

The staff at PHL have been working to revise their fee rates for the testing that they do, employing a method similar to that used by the ETL, i.e. measuring the time taken by staff and equipment to do tests, and adding in the costs of services and supplies. New fee rates were adopted by the Board as this report was being prepared.

There is some concern that if the ETL was merged with the PHL the ETL would make it more difficult for the PHL to meet its target NCC. This issue was mentioned in the Comments on the Consolidation of the ACWM Environmental Toxicology Lab (ETL) into the DPH Public Health Lab (PHL), prepared by the Department of Public Health on July 20, 2010, when it was thought that the NCC of the ETL was about \$1.2 million per year. As explained in Section 5.2 above, in any transfer between Departments, the NCC would be about \$2 million per year.

# 4. Space Considerations

If the ETL is transferred to the DPH, there are four possibilities for its physical location and space requirements:

- Leave the ETL As It Is
- Refurbish the Current Facilities
- Relocate the ETL to the PHL's premises
- Move the ETL to a Building near the PHL or to a Building in a Different Area.

These possibilities are examined below:

#### i. Leave the ETL As It Is

As explained in Section 5.1.4.i above, the ETL could continue to operate at its current staffing level in its current condition at its present location for the foreseeable future. It could not accommodate an additional 5-7 staff, for example, all the staff in the Water Lab of the PHL.

#### ii. Refurbish the Current Facilities

Refurbishment of ETL's current facilities would be the same under the ACWM or the DPH. The refurbishment required is detailed above under Section 5.1.4.ii. After refurbishment, unless the four open positions are not filled, the current ETL would still not be able to accommodate up to 4 or 5 additional staff from the PHL's Environmental Microbiology section, should the ETL's and PHL's microbiological water testing services be rationalized.

However, if the building in which the ETL is housed was transferred to the DPH along with the ETL, so that the ETL became the prime user for the building, the PHL water testing function could be accommodated in the existing ETL building. A new laboratory could be built out on 1st floor combining the PHL group along with some of the ETL Microbiological staff so that these functions are together. This would allow the existing Organic and Inorganic laboratories on the second floor room for future growth.

In the event the PHL-ETL client base and / or work load grows and expansion is required, the other users on the 1<sup>st</sup> floor in the building would need to be moved out to allow for the required expansion. The laboratory functions at the ETL building are currently split between floors. Both the Lead and Elements Laboratories are currently located on the 1st floor so it may be possible to reduce the costs for the build out of a new microbiology laboratory space on the 1<sup>st</sup> floor by utilizing the existing adjacent infrastructure which appears to be sufficient to handle the additional loads.

38

#### iii. Relocate the ETL to the PHL's Premises.

The PHL does not currently have enough space to accommodate the ETL.

# iv. Relocate the ETL to a Building near the PHL or in a Different Area

It would probably be possible to build a new two-story building on the site of the trailer currently used by PHL. However, as explained above in section 5.1.4.iii, it would be expensive, costing in the region of \$10-13 million.

It is also possible that an existing building could be found that could accommodate the ETL. We appreciate that the ACWM wishes to take over the premises that the ETL currently occupies and use it for office purposes, but in view of the difficulties of moving the ETL we consider that it would be easier to find a different building for office space.

#### 5. Staff Attitudes

Senior staff at the DPH have an open mind as to the organizational placement of the ETL but are not keen to accept the laboratory, as evidenced by more than six months of discussions since the Board of Supervisors asked the CEO to report on the feasibility of moving the ETL from the ACWM to the DPH. Senior staff at the PHL are strongly against merging with the ETL, pointing out the difficulties of managing a laboratory with which they have little in common, particularly if it is in a different location. Other staff at the PHL are neutral though they cannot see how the ETL could fit into the space occupied by the PHL. There is even some thought that adding chemical testing to the small chemical laboratory at PHL and doing chemical and more microbiological water testing, could be good for the PHL in the longer term.

# 6. Support Services

The PHL is in a building that was re-purposed five years ago. As a consequence, the building has a much more modern appearance than ETL's premises.

The PHL has six information technology staff on the premises. The Sunquest Laboratory Information System (LIS) has been fully implemented with the upgrade to version 7.1. IT support for high-priority, short-term system problems is immediately available. The PHL has its own data center, as compared to the ETL which uses that of ISD at a cost to ETL of about \$8,000 per month.

If the ETL was to be merged with the PHL we would expect that the PHL's support services would need to be expanded but that they would be able to cope.

# 7. Placement of Other County Laboratories

Of the seven County laboratories that responded to our survey and the question regarding the placement of the water testing laboratory in their organization, five of the laboratories were in a Public Health Department, or equivalent.

# 8. Time and Difficulty of Implementing Change

The three organizational placements within the DPH considered are:

- Transfer the ETL to the DPH and place it in the Environmental Health Division or the Communicable Disease Control and Prevention Division
- Merge the ETL with the PHL
- Restructure the PHL/ETL.

These alternatives are examined below.

# 1. Transfer the ETL to the DPH and Place It in the Environmental Health Division or the Communicable Disease Control and Prevention Division

The Environmental Health Division of DPH has many responsibilities, some of which relate to water. However, it currently has no capability for testing water. The Communicable Disease Control and Prevention Division has the PHL which tests water within its organization.

The pros and cons of placing the ETL in either division are similar for most of the evaluation criteria, except for:

Logical Affinity: The Environmental Health Division requires the testing services that the ETL performs, but the argument for a client-centric placement of the ETL with the Environmental Health Division is overwhelmed by the argument for placing it in the Department of Public Works, which is a much larger client of the ETL.

The greatest number of tests that the ETL currently performs is on drinking water. The ETL deals more with environmental health issues than communicable diseases.

Time and Difficulty of Implementing Change: Locating the ETL directly in the Communicable Disease Control and Prevention Division, which has the PHL, under the control of the Director of the Division who is the Project Manager for this study, would make for a slightly easier transition than placing it in the Environmental Health Division.

Long term the Environmental Health Division could be a logical place for the ETL, but in the short-term, an easier transition outweighs the theoretical benefits of a more logical affinity.

# 2. Merge The ETL with the PHL

If the ETL was merged with the PHL it could not share the same building because there is not sufficient space. However, it would be possible to erect a two-story building to replace the trailers that are adjacent to the main building and in which some staff are currently located. Alternatively, the ETL could be left in the building in which it is presently located, which is only about one mile from the PHL, or relocated in another building. As explained above, if the ETL and the PHL were merged, the most sensible location for the ETL would be for it to stay in its present location.

The merged laboratories would adopt the DPH policies and procedures. Purchasing would be routed through DPH. Maintenance of facilities could continue to be provided by ISD. Administration staff at ETL would need to be trained in the new procedures. Management at the ETL would remain attending to the majority of the day-to-day work, but management at PHL would also need to accommodate additional workload.

IT support would be provided by PHL staff, and within a reasonable time, the ETL would discontinue the use of LIMS and transfer to LIS, which is run at the PHL data center. In the interim, ACWM would be expected to support LIMS until the transfer took place. ETL's personal computer software would be upgraded to be the same as PHL's.

Any rationalization of overlapping microbiological water testing services would be determined by the PHL and ETL management in discussion, but it would seem to make sense for the County, if not the laboratory staff, for there to be only one place doing microbiology testing of water and only one place doing other particular matrices.

The time for ETL to transition from the ACWM to the DPH would be about a year, and there would be transition costs. However, once the year was over, as far as the County is concerned, the increased costs incurred by the DPH should be offset by reductions in costs by the ACWM – unless the transfer was made financially neutral and the ACWM continued to carry the NCC of the ETL. Then the PHL would not incur extra costs.

#### 3. Restructure the PHL/ETL

This alternative considers the totality of the services provided by the ETL and the PHL. Recognizing that there is a difference between a chemical

laboratory and a microbiology laboratory - a difference that is enhanced by having different locations and different clients - it would seem appropriate to have two separate laboratories arranged in a logical manner to cover the services required.

If the work of the PHL and the ETL was logically rationalized, there would be no overlapping services. The determination of the work to be done by each laboratory would not be decided by discussions between the PHL and ETL, though the staff in the laboratories would obviously advise on the matter, but would be decided at a level above the laboratories, that is at the Communicable Disease Control and Prevention Division level. Each laboratory would operate independently, using shared support services where appropriate, and be coordinated at the Division level. The ETL would be added to the four Programs and PHL already in the organization chart as a sixth entity, as shown below.

Figure 5.21 - Potential Organizational Chart

There would still be substantial change due to relocating some staff both organizationally and physically, the adoption of DPH policies and procedures instead of those of ACWM, the movement of some equipment, and the changes in support services. The degree of change would be about the same, though different, as if the ETL was merged into the PHL. The PHL management would be affected less, but the divisional staff would be affected more. To assist the divisional staff, one additional senior administrative ETL position would be necessary at an estimated annual cost of \$101,800 in salary and employee benefits. The new position would be needed at the ETL to provide administrative support and assist with assignments from the Board, DPH Executives, CDCP Director, Human Resources, Finance, and Materials Management to name a few. The position could also assist with revitalizing the ETL, strategic planning,

establishing and obtaining approval for a new rate structure, and other needs that may occur if the ETL were transferred to DPH.

The ETL may not need to change from LIMS to LIS if DPH IT support is willing to train on LIMS, but facilities maintenance, HR, purchasing, accounting and finance would become responsibilities of DPH instead of ACWM. We would expect that the time and cost for the transition would be about the same as merging the ETL with the PHL.

# 5.3 Transfer the ETL to another Department within Los Angeles County

This alternative considers a client-centric organization in which the ETL becomes part of its largest customer, the Department of Public Works (DPW) - a transfer to the DPW being preferable to a transfer to ISD.

# 1. Logical Affinity

DPW provides 90% of the tests that the ETL performs. In relation to water it is organized into Waterworks, Flood Maintenance, Water Resources, Watershed Management and Disaster Services Groups. DPW is concerned with groundwater banking, recycled water, water supply recharge, water conservation, water reclamation, dry-weather urban runoff, water quality monitoring, enhanced waterways. There is no doubt that the DPW has a strong logical affinity to water and the ETL.

#### 2. Services Offered

The DPW does not have a water testing laboratory. If the ETL was located in the DPW, the DPW would need to adopt the ETL as an ongoing concern. The services of the ETL would not change immediately unless the DPW decided to restrict the ETL to provide services only to the DPW. In the longer term, the type and volume of ETL's services are likely to increase, because parts of DPW, that currently use outside laboratories for the testing of soils and other types of samples that the ETL could test, would transfer their testing to ETL.

#### 3. Financial Viability

The main user of the ETL is the Waterworks Division of the Department of Public Works. It comprises five Water Districts that are not owned by the County. The County's Board of Supervisors is also the Board of Directors for the Water Districts.

The main aims of the Water Districts are to satisfy the regulations and have water testing done economically. The Waterworks Division spends less than \$500,000 per year with the ETL. On its own it is unlikely to be able to support the ETL, but in combination with other divisions in the DPW it probably could. There would

need to be some financial arrangement with the County to prevent the DPW's costs for water testing from rising, at least during a transition period.

# 4. Space Considerations

We have not investigated whether the DPW has space to house the ETL in different premises than the ETL is in now.

#### 5. Staff Attitudes

At meetings held on December 18, 2012 and January 14, 2013, the DPW was given an opportunity to take over the ETL. It declined to do so. ISD similarly declined to take over the ETL.

## 6. Support Services

The DPW is a large Department with about 4,000 staff and commensurate support services. It has its own IT staff but does much of its purchasing through ISD.

# 7. Placement of Other County Laboratories

Based on our survey and seven responses informing us about the department in which other Counties locate their water testing laboratories, only Ventura County has its laboratory in a department of public works.

# 8. Time and Difficulty of Implementing Change

The time and difficulty of transferring the ETL from the ACWM to the DPW has not been investigated in detail but is expected to be similar to transferring the ETL to DPH.

#### 5.4 Outsource Most of the Work of the ETL

This alternative considers closing down the ETL and its clients using other laboratories. The best arrangement with this alternative is for the microbiology tests currently done by the ETL to be done at the PHL, and the other tests to be outsourced, probably to private laboratories.

#### 1. Logical Affinity

The PHL is already doing microbiology tests on water. The private laboratories that would be selected for the other tests already do those tests. There is no issue with the logical affinities for this alternative.

#### 2. Services Offered

As of June 2012, in California, the ETL is one of 604 ELAP/NELAP accredited laboratories, 46 of which are county laboratories, one of 146 laboratories certified for nitrate analysis in drinking water, and one of 44 laboratories certified for Chromium (VI) analysis in drinking water.

It would be sensible for the PHL to take over the microbiology testing that the ETL performs and to outsource the other testing. We have not done a survey of outside laboratories to ensure that all of the ETL's other services can be obtained from other laboratories. However, everyone that we have discussed the topic with during the study, including the senior staff at the ETL, believes that all of ETL's services are available at other laboratories.

The ETL prides itself on the fact that its wide variety of tests provides a one stop shop for its clients. We do not know whether all of ETL's current services can be obtained from one laboratory. However, ETL clients that we have spoken to do not see a problem with splitting a sample and combining the results when they are received from different sources.

We received nine responses to a survey of a dozen County or State organizations that have a laboratory conducting routine testing of water. The survey was administered on-line following a telephone call to each organization to determine the most appropriate respondent. A copy of the survey form is shown in Appendix VI. Results are shown in Appendix VII. The name, title, and contact information of each person who provided other counties' information are listed in Appendix VIII.

#### The organizations solicited were:

- 1. Alameda County Public Health Laboratory
- 2. Water Pollution Control Laboratory ✓
- 3. Monterey County Consolidated Environmental Laboratory ✓
- 4. Orange County Public Health Laboratory ✓
- 5. Riverside County Public Health Laboratory ✓
- 6. SRCSD Environmental Laboratory ✓
- 7. San Bernardino County Public Health Laboratory ✓
- 8. San Diego County Public Health Laboratory ✓
- 9. SFPUC WQD Southeast Wastewater Treatment Plant Lab ✓
- 10. Santa Clara County Public Health Lab
- 11. Ventura County Waterworks Districts ✓
- 12. State of California Environmental Chemistry Lab

A total of 9 responses were received (identified by checks above). A detailed conversation with staff at the Environmental Laboratory Accreditation Program (ELAP) revealed that the State does not have a laboratory that undertakes any

routine testing of water. Testing is done only for research purposes or in connection with hazardous materials.

All of the respondents conducted some analysis of water. Seven of the 9 respondents provided analysis of drinking water.

Figure 5.22 – Types of Water Analyses by Other Counties

Eight of the respondents provided microbiology of drinking water.

Figure 5.23 – Accreditations of Other County Laboratories

All of the labs were accredited to perform bacteria analysis for Title 22 compliance.

Figure 5.24 – Title 22 Analyses by Other County Laboratories

Only six respondents provided NPDES permit compliance testing.

Figure 5.25 – Title 22 Analyses by Other County Laboratories

One organization was also able to perform metals, organics, BOD, COD, ammonia, total & fecal coliform, enteroccucus, TKN, and others. Only one organization provided testing of pesticide residue (Organochlorine pesticide).

The 9 laboratories represented a total of 202 staff, as follows:

Figure 5.26 - Staff Employed at Surveyed Laboratories

Into the listed categories if possible)								
Answer Options	Response Average	Response Total	Response Count					
Executive	1.71	12	7					
Chemists	7.40	37	5					
Toxicologists		li ji	4					
Microbiologists	11.50	69	6					
Technicians	5.50	33	6					
Laboratory Assistants	4.71	33						
Administrative	2.13	17	8					
Total	22.44	202	9					

# 3. Financial Viability

The main advantage of closing the ETL and having clients send their samples directly to other laboratories for testing is economic. Private laboratories could probably do the tests that ETL performs at a lower cost to the County. However, we believe that, with its current resources, the ETL could reduce its NCC and cost the County only little more than using other laboratories if it increased its volume of tests, rationalized its services and revised its fee rates.

#### 4. Space Considerations

Outsourcing the testing would free the space that the ETL currently occupies. The ACWM requires the space for office purposes.

If the PHL were to take over the ETL's microbiology water testing services, the testing would presumably be done in the Environmental Microbiology Laboratory, or Water Lab, in the PHL.

There are currently 4 full time and 1 part time staff that focus on the microbiology testing at the ETL. It may be feasible to relocate this group to the PHL even though the existing Environmental Microbiology Group at the PHL is located in approximately 500 square feet. In order to merge the ETL staff into the Environmental Microbiology Group, a portion of the adjacent Administration area and an adjoining Training Room would need to be converted to laboratory space. The construction necessary for the conversion of the Administration area being

repurposed will need to be carefully considered, with provisions made so as not to affect the ongoing testing being done in the adjacent labs.

The existing infrastructure - lighting, ceilings, HVAC, etc. - now designed for office use would need to be reworked for the added laboratory functions. The existing electrical infrastructure on the site, which currently has reliability issues, would need to be investigated to determine if it can support the additional loads.

The displaced administration and training functions would be moved out of the PHL building and possibly into a new portable building similar to those currently being utilized in the back parking lot. The needed modifications to this new portable building would be minimal based on these non-laboratory functions.

#### 5. Staff Attitudes

All of the county staff who oppose, or are not keen to accept, a placement of the ETL in their organization are in favor of ETL's clients using other laboratories. The staff employed by the ETL are not. Many of the staff at the ETL perform specialized work so it would be difficult to relocate them in other County positions. A few may find positions at the PHL, which should take over the microbiology testing of water that the ETL currently does, and we would expect the County to initiate a considerable outplacement effort to help the staff find other jobs.

# 6. Support Services

Closure of the ETL would eliminate the need for support services. However, as clients would transfer their testing at different points in time, support services would be needed until the ETL was completely closed. There would be costs associated with moving, selling or otherwise disposing of equipment and other scientific apparatus.

# 7. Placement of Other County Laboratories

The County does outsource many of its required services, so there is precedent for using private laboratories for necessary testing. At other county laboratories, six respondents stated that they outsourced some of the analysis work.

Figure 5.27 – Work Outsourced by Other County Laboratories

The total value of respondents' outsourced work was estimated at about \$700,000.

In response to the make-up of clients the other laboratories responded as follows:

- Public organizations.
- Regulatory Agencies and County Departments
- Water Testing: Private entities (small water systems)
- Internal San Francisco Public Utilities Commission clients, external include other City & County of San Francisco departments (e.g., Port, Airport, DPW), wholesale customer DW agencies (e.g., East bay and peninsula Cities & water utilities), NGOs (provide testing for environmental studies).
- It is an even mix of county departments (environmental health and water resources agency), public water systems, agricultural clients, and private.
- We will be discontinuing water testing as of 12/31/2012. Currently our clients are private clients.
- Clients are County Departments Only. (Internal ONLY) Chemistry laboratory is part of Orange's County's Public Health Department and can only perform services for intra-County Departments. Chemistry Department actively supports Public Health Health Care Agency's various Departments like the Environmental Health, Childhood Lead Poisoning, Prevention Program, Clinics, Laboratory Safety Program for SA, Chemical Hygiene Plan training and other safety activities.
- Mainly county departments, hospitals.

# 8. Time and Difficulty of Implementing Change

Closing the ETL as well as selecting and working with other laboratories would not be without difficulties. It will be difficult for the ETL to continue providing necessary services while staff are leaving for other jobs.

The clients will need to select appropriate new laboratories and would likely need expert advice from ETL senior staff to enable them to evaluate the outside laboratories.

Based on our extensive experience of engaging professional services, but not laboratories, for our other clients, we consider that the major disadvantages of using other laboratories for all the testing that ETL currently does are:

- 1. There is a high risk that the performances of other laboratories will show considerable variations. Some will be good, but others may not be so good. It could take time for the clients to find the good ones. The ETL has a very high client satisfaction rating.
- 2. If the ETL clients cannot identify an outside laboratory that can perform all their needed tests, then they may have to interpret different report formats from different laboratory systems, making their work a little more difficult.
- 3. Other laboratories will not have the understanding of the County's requirements that the ETL staff have. Due partly to the County's policy of sharing the work between multiple laboratories, other laboratories will not develop the knowledge that the stable workforce at the ETL has.
- 4. ETL's clients will not have the necessary expertise to select the best laboratories for their testing. It may be best for the ETL to select suitable laboratories for the clients.

There is also an argument that the County will not have as much control over its ability to respond quickly to changes in testing requirements. However, our experience has been that private organizations respond just as quickly if a suitable contracting method is used, and maybe more quickly, considering the limitations on resources that a County laboratory may have.

We expect that it would take the best part of a year to transfer all of ETL's services to other laboratories.

#### 6. COMPARISON OF THE ALTERNATIVES

The assessment above considered:

Four options for keeping the ETL in the ACWM

From the options for maintaining the ETL in the ACWM we selected option four as the most beneficial. It is very similar to alternative two, but as well as revitalizing the direction of the ETL it transfers the water testing done by the PHL to the ETL to increase efficiency.

Three options for transferring the ETL to the DPH

One of the three options for transferring the ETL to the DPH was eliminated. It transferred the ETL to the DPH Environmental Health Division, but the arguments for this are not as strong as placing it in the Communicable Disease Control and Prevention Division of the DPH in the short-term.

Both the other options are compared below. One is the alternative that was assumed when we started the study, that of the PHL taking over the ETL. The other is to transfer the ETL to the DPH but to retain its identity as the ETL, doing different work to the PHL.

Two options for transferring the ETL to the DPW

Both options are considered for a transfer of ETL to DPW. One is where the DPW continues to operate the ETL as a service to any entity needing ETL's testing services. The other confines the ETL to serving only the DPW, with other clients of the ETL finding other laboratories.

Closing the ETL and leaving the clients to employ other laboratories.

This would transfer as much as possible of the microbiology testing done by the ETL to the PHL, and outsource the remainder of the testing.

In summary, the alternatives compared below are:

ACWM Keep the ETL in the ACWM, revitalize the direction of the ETL, redefine

the roles of ETL and PHL and transfer PHL water testing to ETL

PHL Merge the ETL with the PHL

DPH Keep the PHL and ETL separate but in the DPH

DPW Transfer the ETL to the DPW

DPW Only Transfer the ETL to the DPW to serve only the DPW

Private Transfer ETL's microbiology testing to the PHL and outsource the

remainder of the testing to non-County laboratories.

At the end of this section a table shows a summary of numerical ratings of the alternatives for each of the eight criteria. Please note that due to the time constraints placed on the study, many assumptions have been made about transferring the ETL to the DPW. In particular, the Financial Viability, Space Considerations, Staff Attitudes and the Time and Difficulty of Implementing Change would benefit from additional detailed investigation to establish more reliable ratings for DPW.

# 6.1 Logical Affinity

The ACWM currently has a product-centric affinity based on water. The DPH could offer product-centric or function-centric affinity. The DPW would provide a client-centric affinity. Each of the alternatives could work. We give each alternative a 3, for average, on a scale of 1 to 5, where 1 is worst and 5 is best.

#### 6.2 Services Offered

**ACWM**: The wide range of services that the ETL currently offers are well appreciated by its clients.

**PHL and DPH**: Transferring the ETL to the DPH would not significantly affect the quality or the variety of the services offered. However, the provision of the services could more easily be rationalized so that the PHL and the ETL do not both offer the same tests and have more resources to cope with variations in the volume of tests required, producing efficiencies that benefit the County.

**DPW**: If the ETL was transferred to the DPW and provided the same services as it does now to the same clients there would be little change. However, a demand for a wider range of testing services for the DPW is likely to open up. Over time, this could make a significant change to the mission, plans, staffing, certifications and character of the ETL.

**DPW Only:** If the ETL was transferred to the DPW and serviced only the DPW, the number of current matrices performed would be cut by about 10% and the variety of matrices currently performed could be cut by about 66 out of the 340 offered now. In this case, the other clients of the ETL would have to find other laboratories for their tests and the costs of the tests performed by the ETL would increase unless resources were released. However, DPW has other testing needs that could replace and increase both the volume of testing and the variety of tests so an increase in the size of the ETL is likely.

**Private**: If the ETL was closed and the ETL's current services provided by the PHL and private laboratories, the quality of the services may be variable but is unknown. ETL's clients may have difficulty interpreting different reports from different laboratory systems and the County's policy of sharing the work between multiple laboratories may not allow the private laboratories to develop an in-depth understanding of the requirements of the Departments. Considering the need for selecting and monitoring the performance of highly specialized laboratories, the clients of ETL may find that using private laboratories is not as convenient as using the ETL.

Ratings: For these reasons, our ratings are:

ACWM	3
PHL	4
DPH	4
DPW	3
DPW Only	2
Private	2

# 6.3 Financial Viability

While there are questions about whether the financial viability of the ETL should even be a criterion, the concern that we have seen about financial matters, and the efforts put into budgets and the control of purchases, indicate to us that it is a criterion of importance.

**ACWM**: Assuming that the ETL and its NCC would be improved by revitalization of the direction of the ETL, we still consider that the financial management and business development processes of the ETL may need improvement by the ACWM. Hence we rate the financial viability below other solutions.

**PHL** and **DPH**: The DPH and the PHL assign responsibilities for meeting budgets to the staff running the operation. The DPH and PHL also have established business development activities. These may improve the financial viability.

**DPW**: Moving the ETL to the DPW would be similar to moving it to the DPH, except that the client providing 90% of the required tests would have control of the finances.

**DPW Only:** If the ETL was serving only the DPW, ongoing financial matters are internal to the DPW. The other clients would use the PHL and private laboratories.

**Private**: If the tests were outsourced, each client Department would have control of the cost of its own testing and the competitive bidding process would ensure that the County is obtaining value for its expenditure on tests. The cost of outsourcing is estimated to be less than that of operating the ETL.

54

Ratings: We give the alternatives ratings as follows:

ACWM	2
PHL	3
DPH	3
DPW	4
DPW Only	4
Private	5

# 6.4 Space Considerations

**PHL**: The PHL does not have the space to accommodate the ETL without expensive new premises.

**Private**: If all of the testing is outsourced the ETL does not require any space.

All Other Alternatives: Provided that the ETL can stay in its current premises all other alternatives are rated the same.

Ratings: Our ratings are:

ACWM	3
PHL	1
DPH	3
DPW	3
DPW Only	3
Private	5

#### 6.5 Staff Attitudes

**ACWM and DPH:** With both of these alternatives, the staff would remain the same. While neither department is keen to have the ETL in their organization they would be willing to accept it for the good of the County.

PHL: PHL senior management is strongly opposed to a merger with the ETL.

**DPW and DPW Only:** A transfer to the DPW would most likely result in a completely different ETL. The Department has officially rejected the opportunity to be responsible for the ETL. As such it is rated similarly to the PHL.

Private: Closure of the ETL would mean that most of the 18 staff would lose their jobs.

Ratings: Our ratings are:

ACWM	2
PHL	1
DPH	2
DPW	1
DPW Only	1
Private	1

# 6.6 Support Services

**ACWM**: The existing support services are adequate with the exception of IT support, which appears to be understaffed at the Department level. At the ETL, IT support is

behind the times and insufficient to ensure the full operation of LIMS in a completely satisfactory manner.

**PHL**: If transferred to the PHL, the ETL would benefit from PHL's on-site IT support staff.

**DPH**: With the ETL as an independent unit we anticipate that ETL staff titles would be modernized and IT support would be improved, in line with PHL's support.

**DPW and DPW only**: We have not investigated the support services of DPW but expect they would be similar to those of DPH.

**Private**: HR, IT, maintenance, real estate, business development, and management support services would disappear. The County would still need purchasing, accounting, financial and management support for other departments using the outside laboratories.

Ratings: Our ratings are:

ACWM	2
PHL	4
DPH	3
DPW	3
DPW Only	3
Private	5

## 6.7 Placement of Other County Laboratories

Most of the other County laboratories are placed in the equivalent of the Department of Public Health, with one in a department of public works. Many have testing done by private laboratories. None that we know of have water testing laboratories placed in the equivalent of Agricultural Commissioner, Weights and Measures. Hence our ratings are:

ACWM	2
PHL	4
DPH	4
DPW	4
DPW Only	4
Private	3

# 6.8 Time and Difficulty of Implementing Change

**ACWM**: Revitalization of the direction of the ETL includes recruiting a Deputy Director, preparing a new vision and strategic plan, establishing business development activities, reducing the NCC, rationalizing services and negotiating with DPH to take business away from the PHL, so it will not be easy.

**PHL**: Increased strains on PHL management, a change of computer systems, and a different culture for the ETL staff would make the transfer more difficult than the other alternatives.

**DPH**: As a revitalized, independent unit in the same location, the ETL would incur major changes due to a different culture, the rationalization of services with PHL and relocation of some staff, and more work at the DPH divisional level.

**DPW and DPW Only**: Though different, these alternatives would be very similar in timing and difficulty to moving the ETL to the DPH. Coordination with the PHL laboratory may be not so easy but coordination may not be required.

**Private**: The ETL would have difficulty outplacing staff, and the County could have difficulties finding and maintaining services from other laboratories as suitable as ETL's.

# Ratings: Our ratings are:

ACWM	4
PHL	2
DPH	4
DPW	4
DPW Only	4
Private	3

# 6.9 Summary of Ratings

The table below summarizes the ratings against the eight criteria, using a scale of 1-5, where 1 is worst placement and 5 is best placement.

Figure 6.1 – Summary of Ratings for Alternative Placements against Criteria

Criteria	Rating 1	Rating 2	Rating 3	Rating 4	Rating 5	Rating 6
Scale 1-5, 1 = worst, 5 = best	ACWM	PHL	DPH	DPW	DPW only	Private
Logical Affinity	3	3	3	3	3	3
Services Offered	3	4	4	3	2	2
Financial Viability	2	3	3	4	4	5
Space Considerations	3	1	3	3	3	5
Staff Attitudes	2	1	2	1	1	1
Support Services	2	4	3	3	3	5
Placement of Other County Laboratories	2	4	4	4	4	3
Time and Difficulty of Implementing Change	4	2	4	4	4	3
Totals	21	22	26	25	24	27

It can be seen that the alternatives are very close in their ratings.

It has to be recognized that all the criteria are not of equal importance. We have not interviewed any Supervisors in order to understand how important the NCC is to the County, but using our own judgment we rate the importance of the criteria as follows:

Services offered to clients is rated most important, which is a weighting of 5.

Financial viability, space considerations and staff attitudes are rated next most important, with a weighting of 4.

Support services, the placement of other county laboratories and the time and difficulty of implementing change are considered less important and weighted a 3.

Logical affinity, on which all alternatives are rated equal, is considered least important and weighted a 2.

When the ratings above are weighted, the ratings table becomes as shown below:

Figure 6.2 – Summary of Weighted Ratings for Alternative Placements

Criteria	Weight	Weighted	Weighted	Weighted	Weighted	Weighted	Weighted
Scale 1-5, 1 = worst, 5 = best		ACWM	PHL	DPH	DPW	DPW only	Private
Logical Affinity	2	6	6	6	6	6	6
Services Offered	5	15	20	20	15	10	10
Financial Viability	4	8	12	12	16	16	20
Space Considerations	4	12	4	12	12	12	20
Staff Attitudes	4	8	4	8	4	4	4
Support Services	3	6	12	9	9	9	15
Placement of Other County Laboratories	3	6	12	12	12	12	9
Time and Difficulty of Implementing Change	3	12	6	12	12	12	9
Totals		73	76	91	86	81	93

It can be seen that the alternatives divide into three groups. Those with ratings in the 90's:

1. Private Outsource the testing to private laboratories

2. DPH Keep the PHL and ETL separate but transfer ETL to the DPH.

Those with ratings in the 80's:

1. DPW Transfer the ETL to the DPW and offer services to all clients

2. DPW Only Transfer the ETL to the DPW for use only by DPW.

Those with ratings in the 70's:

ACWM Keep the ETL in the ACWM
 PHL Merge the ETL with the PHL.

Considering the accuracy of the subjective ratings and weightings, the alternatives in each group should be considered equal.

#### 7. RECOMMENDATIONS

Based on the above weighted comparative ratings, our placement recommendation is either to:

- 1. Transfer ETL's microbiology testing to the PHL and outsource the remainder of the testing to laboratories outside the County, or
- 2. Transfer the ETL to the DPH as an independent unit, not merged with the PHL.

If the decision is to outsource the work of the ETL, the ACWM will also have to decide whether it uses the expertise of the ETL to assist its clients to find other suitable laboratories, or whether it simply tells the ETL's clients that the ETL is closing on a particular date.

Should the decision be to transfer the ETL to the DPH, we recommend that the Board of Supervisor's designate the DPH to do all the water testing for the County and direct all County Departments that need to test water to have their water tested by DPH, either at the PHL or the ETL, depending on the nature of the tests.

Details of actions to be taken are provided in the next section of this report.

#### 8. INITIAL ACTION PLANS

The initial actions will depend on whether the Board of Supervisors decides to terminate the operations of the ETL, or transfer the ETL to the DPH.

#### 8.1 Outsource the Work of the ETL

Following a Board decision to outsource ETL's services and transfer the microbiology testing from the ETL to the PHL, it may be difficult to continue the full operation of the ETL if staff leave for other jobs. Steps will need to be taken to mitigate the displacement of staff. Clients of the ETL will immediately know the Board's decision and will need to know as soon as possible what arrangements can be made to continue their necessary tests.

Clients, such as the DPW, with established relationships with other laboratories may be able to transfer their work to the other laboratories quickly. Others may need to go through a procurement process that could take many months. The most controlled procedure would be for the ETL to start outsourcing the analyses to other laboratories before recommending to clients other laboratories that they could use.

In regard to the transfer of the microbiology testing to the PHL, the PHL will need time to accommodate an additional 12,000 matrices per year from the ETL on top of the approximately 5,000 per year that it currently performs on water. As explained in Section 5.2.4 on page 48, the water testing laboratory at the PHL occupies about 500 square feet. This would need to be expanded to take on additional tests and staff, and this would take some time. There is therefore a probability that some of the microbiology testing revenue will be lost to the County as clients may find other suitable laboratories before the PHL is ready to take on much additional work.

#### 8.2 Transfer the ETL as a Unit to the DPH

Following a Board decision to transfer the ETL from the ACWM to the DPH, the actions that need to be taken are:

- 1. Communicate the Board's decisions to the staff and all the clients of the ETL.
- 2. Have the CEO, ACWM and the DPH make decisions regarding the:
  - ETL's NCC and whether the ACWM will carry the NCC or transfer it to the DPH
  - continued use of the ETL's current building when the ETL is in the DPH, including the use of parts of the building not currently occupied by ETL.
- 3. Develop a new mission statement and strategic plan for the ETL.

The new mission statement and strategic plan should be based on ETL's role being to:

- direct the County's environmental toxicology testing of water
- manage the resources and projects relating to the County's environmental toxicology testing
- provide expert counsel and services related to environmental toxicology testing for each County department and across all departments.

The strategic plan should address the critical areas of:

- i. Public Responsibility
- ii. Customer Service
- iii. Quality of Services
- iv. Financial and Physical Resources
- v. Innovation
- vi. Growth
- vii. Productivity
- viii. Manager Performance and Development
- ix. Staff Performance and Attitude
- x. Net County Cost.

Key Performance Indicators (KPI) should be established and a means of measuring and tracking performance against the key indicators established.

- 4. Have the PHL and the ETL work closely together to avoid overlapping services and to provide a "one-stop shop" for comprehensive water testing for their clients, which includes sending out uneconomic tests to other laboratories that specialize in the tests They should advise the Director of the Communicable Disease Control and Prevention Division on:
  - which tests each laboratory should do so that tests are performed most efficiently
  - how resources should be redistributed to perform the tests
  - how any additional certifications required will be obtained
  - the plans and timescale for effecting the changes.
- 5. Set up the ETL within the DPH organization, establishing to whom the ETL will report and the planned structure of the ETL, taking account of services to be offered and future staffing.
- 6. Adopt a new pricing strategy and revise the fee rates that ETL charges.
- 7. Set up the administration, accounting and financial systems for the ETL within the DPH.

- 8. Initiate business development activities within the County and with other public organizations in order to reach a volume of business that can be accommodated in the existing facility and which minimizes the ETL's NCC.
- 9. Modernize the premises occupied by ETL. Our recommendations for the possible refurbishment of the building are set out in Section 5.4.ii, page 27.
- 10. Initiate recruitment of a Deputy-Director, or ETL Director, to lead the ETL. As the recruitment of a suitable ETL Director may take an extended period of time, the actions above should be started by setting up a Project Office to carry out the work.

### 9. REPORT CONCLUSION

We recognize that more analysis could and should be done for management purposes, but we believe that the above analysis has been sufficient to prepare a recommendation for the placement of the ETL.

We wish to thank all the people who contributed to this study, and, in particular, Dr. Robert Kim-Farley, the Project Manager, for his guidance.

### APPENDIX I – PEOPLE INTERVIEWED

During the course of the study the following people contributed information personally:

### Department of Public Health (DPH)

- 1. Dr. Jonathan Fielding, Director
- 2. Ms. Cynthia Harding, Chief Deputy Director

### DPH, Communicable Disease Control and Prevention Division

- 3. Dr. Robert Kim-Farley, Director, Project Manager
- 4. Maureen Quraishi, Senior Administrative Officer

### DPH, Communicable Disease Control and Prevention Division, Public Health Laboratory

- 5. Dr. J. Michael Janda, Director
- 6. Dr. Nicole Green, Assistant Director
- 7. Ernesto Ablang, Information Techology Supervisor I
- 8. Jeffrey Antig, Med Tech II
- 9. Eric Clark, PH Scientist III
- 10. Mary Beth Duke, Laboratory Manager
- 11. Antony LaPenna, PH Scientist III
- 12. Michael Stephens, PH Microbiology Supervisor I
- 13. Joan Sturgeon, Bacteriology Technical Support, Microbiology Supervisor II
- 14. Dr. Robert Tran, BT/CT, Microbiology Supervisor II
- 15. Alon Volner, Chief Chemist

### DPH, Environmental Health

- 16. Angelo Bellomo, Director
- 17. Dr. Cyrus Rangan, Director, Bureau of Toxicology and Environmental Assessment
- 18. Charlene Contreras, Manager, Emergency Preparedness and Response
- 19. Bernard Franklin, Environmental Health Water Quality and Waste Management
- 20. Michael Jordan, Environmental Health Emergency Preparedness and Response
- 21. Becky Valenti, Environmental Health Water Quality and Waste Management
- 22. Aura Wong, Environmental Health Services Manager

### Agricultural Commissioner / Weights and Measures (ACWM)

- 23. Kurt Floren, Agricultural Commissioner/Director of Weights and Measures
- 24. Richard Iizuka, Chief Deputy Director
- 25. Alycia Araya, Chief, Administrative Services Bureau
- 26. Sharon Butterworth, Division Head, Budget & Fiscal Services
- 27. Scott Hunter, Information Systems Supervisor III

### ACWM Environmental Toxicology Laboratory

- 28. Dr. Thant Win, Chief, Environmental Toxicology Laboratory
- 29. William Chen, Supervising Toxicologist, Inorganic Testing/Field Section
- 30. Maggie Xuan, Supervising Toxicologist, Organic/Microbiology Testing Section
- 31. Kamilia Salama, Laboratory Assistant

32. Lillie Sanchez, Laboratory Assistant

### **CEO's Office**

33. Richard Martinez, Budget Analyst

### **Internal Services Department**

- 34. Tim Braden, General Manager, Facilities Operations Service
- 35. Cesar Menchaca, Division Manager, Alterations & Improvements Division
- 36. Manuel Hernandez, Manager II, Alterations & Improvements

### Department of Public Works, Waterworks Division

- 37. Adam Ariki, Assistant Deputy Director
- 38. Dr. T. J. Kim, Senior Civil Engineer, Waterworks Division
- 39. Daniel Lafferty, Assistant Division Engineer

### Other

40. Dr. Wasfy Shindy, past Deputy Director of the ETL

### APPENDIX II - RAW DATA ABOUT TESTS PERFORMED BY THE ETL

This appendix contains raw data used to assess the ETL. It has:

- A list of the pricing methods and the number of matrices performed for each method each year for the four years 2006/7 to 2008/9 and 2010/11. The year 2009-10 was excluded because of possible inaccuracies due to implementation of the Laboratory Information Management System (LIMS).
- The number of each matrix performed each month from November 1, 2011 to October 31, 2012, taken from a LIMS report.
- The number of each matrix performed for each client from November 1, 2011 to October 31, 2012, taken from a LIMS report.
- Annual budgets and actuals, revenues and expenditures figures.
- A list of ETL's current Group III fee rates and the draft new fee rates currently awaiting approval, plus fee rates from other laboratories.

### APPENDIX III - ANALYSIS OF NUMBERS OF TESTS PERFORMED

This appendix contains analyses of the raw data shown in Appendix II, using the most appropriate volume figures, to calculate the:

- Number of different matrices performed in total and by science, i.e. inorganic, organic, microbiological, biological, and tests sent out to other laboratories.
- Number of matrices performed by type of sample, e.g. drinking water, water, food, plant, paint, etc.
- Number of matrices performed by type of sample by month.
- Number of matrices performed in total and by type of sample by client.

### **Number of Different Matrices Performed (6 pages)**

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                            |
